Biochemistry and the Central Nervous System Henry McIlwain, H. S. Bachelard, 1985 **Biochemistry and the Central Nervous System ... Second Edition, Etc** Henry MACILWAIN, 1959 **Biochemistry and the Central Nervous System ... Third Edition, Etc** Henry MACILWAIN, 1966 **Biochemistry and the Central Nervous System, Etc** Henry MACILWAIN, 1955 Biochemistry of the Central Nervous System International Congress of Biochemistry (4th: 1958: Vienna), 1959 **Biochemistry of the Central Nervous System** F. Brücke, 1959 Biochemistry of the Central Nervous System, 1959 Problems of the Biochemistry of the Nervous System A. V. Palladin, 2013-10-22

Problems of the Biochemistry of the Nervous System is a collection of papers presented at the Second Conference on the Biochemistry of the Nervous System organized by the Institute of Biochemistry of the Ukrainian Academy of Sciences on February 12-16, 1957. The contributors consider particularly Soviet's considerable research works in the field of functional biochemistry and the dynamic aspects of the biochemistry of the central nervous system. This text is organized into 11 parts encompassing 33 chapters and begins with reviews on proteins and their metabolism in the brain and peripheral nerves, the effect of functional states such as excitation and inhibition upon them, and the changes occurring in their metabolism during growth. The succeeding parts contain articles about phosphorus-containing substances and methods of their investigation. These topics are followed by discussion of the chemical nature of brain glycogen and its different fractions, carbohydrate metabolism during excitation and inhibition, and the adrenaline metabolism. Other parts tackle the ammonia metabolism, the developmental biochemistry of the brain, and the histochemical approach to study nucleoproteins of the neurons. The remaining parts deal with hypothermia and the cerebral metabolism in some pathological conditions. This book will prove useful to biochemists, biologists, and neurologists.

Biochemistry of Characterised Neurons Neville N. Osborne, 2013-10-22

Biochemistry of Characterised Neurons provides a report on the progress made in the analysis of the biology of specific neurons in the central nervous system. This book emphasizes the biochemical, morphological, and functional aspects of characterized neurons, including ways and sophisticated techniques of isolating them. This publication is divided into 11 chapters. The first chapter evaluates the relevance of working with single neurons. Chapters 2 to 6 discuss specific characterized invertebrate neurons containing one of the putative neurotransmitter substances. Chapter 7 deals with the biochemistry of a unique vertebrate Torpedo cholinergic system that enables pure cholinergic neuronal cell bodies and endings to be analyzed separately. The sensitive radiochemical procedures used to analyze transmitter substances and transmitter enzymes, and how they can be adapted to map the distribution of transmitters in individual neurons of *Aplysia*, are discussed in Chapter 8. Chapter 9 describes methods for the analysis of specific cells in the retina, while Chapters 10 and 11 focus on the analysis of proteins within defined neurons. This text is beneficial to biochemists and students interested in analyzing neurons.

Biochemistry of the Central Nervous System Franz Brücke, 1959 *Biochemical Factors Concerned in the Functional Activity of the Nervous System* D. Richter, 2013-10-22 Biochemical Factors Concerned in the Functional Activity of the Nervous System presents the biological aspects concerned in the functional activity of the nervous system This book covers several interesting topics concerning the central nervous system including phospholipids RNA synthesis nerve impulse flow and nerve growth factor Comprised of 213 chapters this book begins with an overview of the electron micrographs of calcium ATP phospholipid complexes This text then examines the biochemical and histochemical studies on sectioned rat spinal cords which demonstrated two types of monoamine reducing drugs Other chapters consider the diversity of antagonistic relations between the thiamine derivatives and vitamin B6 which is manifested by changes in the glutamate GABA histidine histamine tryptophan serotonin and tyrosine noradrenaline systems This book discusses as well the influence of a conditioned avoidance training experience on the incorporation of radioactive uridine into the RNA of mouse brain The final chapter deals with the amino acid incorporating activity of cerebral polyribosomes This book is a valuable resource for biochemists neurologists pharmacologists and biophysicists *Proceedings*, 1959

Protein Metabolism of the Nervous System Abel Lajtha, 2012-12-06 Few can deny the paramount importance of the neurosciences undoubtedly one of the most challenging fields in contemporary science Recent years have witnessed the awakening of interest in brain research by many distinguished investigators from other branches of science which has made possible the multidisciplinary approach needed for the complex problems of this field The present book which deals with one aspect of this research is the result of the symposium held under the auspices of the New York State Research Institute for Neurochemistry and Drug Addiction in April 1968 It has become clear that brain proteins are involved in all aspects of mental function and dysfunction and the present volume documents the latest advances in our knowledge advances made to a large extent by contributors to this volume The chapters not only convey some of the enthusiasm and wonderful cooperative spirit of the many excellent scientists exploring the brain and their wealth of ideas they also illustrate the many approaches from which cerebral proteins can be studied in a meaningful manner In some areas even preliminary evidence is worth discussing e g it is an exciting achievement that we can begin to apply the disciplines of biochemistry to phenomena of learned behavior and information handling *Variation in Chemical Composition of the Nervous System* G. B. Ansell, 2013-10-22 Variation in Chemical Composition of the Nervous System As Determined by Developmental and Genetic Factors documents the proceedings of the International Neurochemical Conference held in Oxford 1965 The three years since the last neurochemical meeting have witnessed rapid progress in the whole field of biology including the development of new concepts based on fresh experimental data and new technical tools A great deal of concentrated effort have led to advances in the molecular aspects of biological processes which have perhaps had most to offer to the formation of new concepts of primary cellular events especially the genetic mechanism regulatory cell processes and protein production This volume contains 100 chapters that provide an overview of

the state of knowledge on the genetic and developmental aspects of the central nervous system Topics covered include the activity of a plasma logenase in the brain of the developing rat genetic selection of rats differing in brain biochemistry the effects of thyroid hormones on steroid deposition in developing chick brain and developmental changes in the gamma globulins of bovine cerebrospinal fluid Biochemical and Pharmacological Roles of Adenosylmethionine and the Central Nervous System Vincenzo Zappia,Earl Usdin,Francesco Salvatore,2013-10-22 Biochemical and Pharmacological Roles of Adenosylmethionine and the Central Nervous System contains the proceedings of an International Round Table on Adenosylmethionine and the Central Nervous System held in Naples Italy on May 2 1978 The papers explore the biochemical and pharmacological roles of S adenosylmethionine SAM with particular emphasis on its functions in the central nervous system CNS This book consists of 13 chapters and opens with an introduction to some novel biochemical aspects of SAM and related sulfur compounds paying particular attention to transmethylation reactions polyamine biosynthesis and unusual biological roles of adenosylmethionine metabolic pathways related to adenosine sulfur compounds and transport of adenosylmethionine The following chapters discuss a number of chemical and biochemical properties of SAM as well as its pharmacological aspects within the CNS The relation between folate and adenosylmethionine metabolism in the brain is examined along with the effect of SAM administration on noradrenaline and serotonin metabolism in rat brain cerebral utilization of adenosylmethionine and adenosylhomocysteine and antidepressant effects of adenosylmethionine Methylation in schizophrenia is also considered This monograph will be a valuable source of information for biochemists and pharmacologists *Cumulated Index Medicus* ,1981 Textbook of Physiology and Biochemistry George Howard Bell,James Norman Davidson,Harold Scarborough,1956 **Comprehensive Insect Physiology, Biochemistry, and Pharmacology: Nervous system** ,1985 **Metabolic and Deficiency Diseases of the Nervous System** P.
