## Calling All Problem Solvers:

*TRIZ for Engineers: Enabling Inventive Problem Solving* Karen Gadd, 2011-03-21 TRIZ is a brilliant toolkit for nurturing engineering creativity and innovation. This accessible, colourful, and practical guide has been developed from problem-solving workshops run by Oxford Creativity, one of the world's top TRIZ training organizations, started by Gadd in 1998. Gadd has successfully introduced TRIZ to many major organisations such as Airbus, Sellafield, Saint Gobain, DCA, Doosan, Babcock, Kraft, Qinetiq, Trelleborg, Rolls Royce, and BAE Systems, working on diverse major projects including next-generation submarines, chocolate packaging, nuclear clean-up, sustainability, and cost reduction. Engineering companies are increasingly recognising and acting upon the need to encourage successful, practical, and systematic innovation at every stage of the engineering process, including product development and design. TRIZ enables greater clarity of thought and taps into the creativity innate in all of us, transforming random, ineffective brainstorming into targeted, audited creative sessions focussed on the problem at hand, and unlocking the engineers' knowledge and genius to identify all the relevant solutions. For good design, engineers and technical directors across all industries, as well as students of engineering, entrepreneurship, and innovation, TRIZ for Engineers will help unlock and realise the potential of TRIZ. The individual tools are straightforward; the problem-solving process is systematic and repeatable, and the results will speak for themselves. This highly innovative book satisfies the need for concise, clearly presented information, together with practical advice on TRIZ and problem-solving algorithms. It employs explanatory techniques, processes, and examples that have been used to train thousands of engineers to use TRIZ successfully. It contains real, relevant, and recent case studies from major blue-chip companies, is illustrated throughout with specially commissioned, full-colour cartoons that illustrate the various concepts and techniques, and bring the theory to life. It turns good engineers into great engineers.

[Introduction to Programming and Problem-Solving Using Scala](#)  
Mark C. Lewis, Lisa Lacher, 2016-10-14 Praise for the first edition: The well-written, comprehensive book is aiming to become a de facto reference for the language and its features and capabilities. The pace is appropriate for beginners; programming concepts are introduced progressively through a range of examples and then used as tools for building applications in various domains, including sophisticated data structures and algorithms. Highly recommended. Students of all levels, faculty, and professionals/practitioners. D. Papamichail, University of Miami, in CHOICE Magazine. Mark Lewis: Introduction to the Art of Programming Using Scala was the first textbook to use Scala for introductory CS courses. Fully revised and expanded, the new edition of this popular text has been divided into two books: Introduction to Programming and Problem Solving Using Scala. It is designed to be used in first-semester college classrooms to teach students beginning programming with Scala. The book focuses on the key topics students need to know in an introductory course, while also highlighting the features that make Scala a great programming language to learn. The book is filled with end-of-chapter projects and exercises, and the authors have also posted a number of different supplements on the book website: Video lectures for each chapter in the book.

are also available on YouTube The videos show construction of code from the ground up and this type of live coding is invaluable for learning to program as it allows students into the mind of a more experienced programmer where they can see the thought processes associated with the development of the code About the Authors Mark Lewis is a Professor at Trinity University He teaches a number of different courses spanning from first semester introductory courses to advanced seminars His research interests included simulations and modeling programming languages and numerical modeling of rings around planets with nearby moons Lisa Lacher is an Assistant Professor at the University of Houston Clear Lake with over 25 years of professional software development experience She teaches a number of different courses spanning from first semester introductory courses to graduate level courses Her research interests include Computer Science Education Agile Software Development Human Computer Interaction and Usability Engineering as well as Measurement and Empirical Software Engineering
