ISSUE	An inadequate number of high-speed charging stations in key urban areas led to extended downtime for our EV logistics fleet.	Inefficient route planning for EV logistics led to increased energy consumption and reduced delivery capacity.	Lack of real-time tracking and management of the EV fleet hindered operational transparency and responsiveness.
IMPACT	This limitation led to a 20% decrease in delivery speed and efficiency, resulting in a noticeable dip in customer satisfaction.	The inefficient routing caused a 15% increase in energy usage and a 10% reduction in daily delivery volumes.	This gap led to challenges in fleet management, including delayed responses to maintenance needs and underutilization of vehicles.
SOLUTION	Positive Charge installed advanced, rapid-charging stations at strategic urban locations, significantly reducing charging time and fleet downtime.	We implemented a dynamic route optimization software, integrating real-time traffic and vehicle charge data, thereby optimizing routes for energy efficiency and delivery speed.	We developed and integrated a comprehensive fleet management system, including real-time tracking, predictive maintenance alerts, and utilization analysis.
