Mathematical Foundations of Image Processing and Analysis 1 Jean-Charles Pinoli, 2014-07-09 Image processing and image analysis are typically important fields in information science and technology. By image processing we generally understand all kinds of operation performed on images or sequences of images in order to increase their quality, restore their original content, emphasize some particular aspect of the information, or optimize their transmission, or to perform radiometric and/or spatial analysis. By image analysis we understand however all kinds of operation performed on images or sequences of images in order to extract qualitative or quantitative data, perform measurements, and apply statistical analysis. Whereas there are nowadays many books dealing with image processing, only a small number deal with image analysis. The methods and techniques involved in these fields of course have a wide range of applications in our daily world: industrial vision, material imaging, medical imaging, biological imaging, multimedia applications, satellite imaging, quality control, traffic control, and so on.
