Artificial Intelligence And Neural Networks Steps Toward Principled Integration:

Artificial Intelligence and Neural Networks Vasant Honavar, Leonard Merrick Uhr, 1994 A growing body of research focuses on how the strengths of traditional artificial intelligence and neural networks can be incorporated into systems that include the best features of both Artificial Intelligence and Neural Networks Steps toward Principled Integration provides readers with a critical examination of the key issues underlying assumptions and relevant suggestions related to the reconciliation and principled integration of artificial intelligence and neural networks into successful hybrid systems A comprehensive introduction to the basics of symbol processing and connectionist networks and their integration gives readers the necessary background to understand each network system Numerous examples of the integration of artificial and neural networks for a variety of specific applications including vision and pattern recognition illustrate the exciting possibilities and actualities of the resultant hybrid systems With contribution from some of the leading researchers in the field this book offers a unique view into this evolving area Back cover

Computational Architectures Integrating Neural and Symbolic Processes Ron Sun, Lawrence A. Bookman, 2007-08-19 *Computational Architectures Integrating Neural and Symbolic Processes* A Perspective on the State of the Art focuses on a currently emerging body of research With the reemergence of neural networks in the 1980s with their emphasis on overcoming some of the limitations of symbolic AI there is clearly a need to support some form of high level symbolic processing in connectionist networks As argued by many researchers on both the symbolic AI and connectionist sides many cognitive tasks e g language understanding and common sense reasoning seem to require high level symbolic capabilities How these capabilities are realized in connectionist networks is a difficult question and it constitutes the focus of this book *Computational Architectures Integrating Neural and Symbolic Processes* addresses the underlying architectural aspects of the integration of neural and symbolic processes In order to provide a basis for a deeper understanding of existing divergent approaches and provide insight for further developments in this field this book presents 1 an examination of specific architectures grouped together according to their approaches their strengths and weaknesses why they work and what they predict and 2 a critique comparison of these approaches *Computational Architectures Integrating Neural and Symbolic Processes* is of interest to researchers graduate students and interested laymen in areas such as cognitive science artificial intelligence computer science cognitive psychology and neurocomputing in keeping up to date with the newest research trends It is a comprehensive in depth introduction to this new emerging field
