Climate Change in the Age of Artificial Intelligence Alexandru Balasescu, 2025-06-14 This book invites the reader to follow seemingly unrelated paths towards the same goal making sense of what it means to be human in a world that casually blends discourses on nature technology and biology with ideas of progress optimization and their capitalization at the centre The author critically analyses current thinking which often looks at technological solutions to the challenges posed by climate change and where artificial intelligence is instrumental in fulfilling the promise of ecological capitalism He instead advocates that we take a closer look at the politics of optimization within and outside managerial perspectives which could reveal that one of the main sources of our repeated failures related to governance and climate change lies not intrinsically in the qualities of the tools we use but in the underlying assumptions with which we design and in the scope of their use Therefore the book looks at possible solutions for humanity that may lie between the rock of technology and the hard place of nature That is it asks for a revision in our implicit assumptions for building our tools critiques the thinking about our relationships with them and re assesses their use Richly documented imaginatively argued and captivantly written this book explores unexpected entanglements of nature culture and technology that emerge in AI's unruly and unforeseen trajectories
