The Asgard Solution James Marino, 1983 *Interactive Multiple-representation Editing of Physically-based 3D Animation* Wayne Alfred Christopher, 1994 Abstract In recent years

much work has been done on realistic animation. It is now possible to simulate and animate a variety of different types of objects and physical effects. However, little attention has been paid to the problem of interactively creating and editing realistic animated scenes. Developing and modifying such scenes is still a batch-oriented process that depends on trial and error. Animation editing for non-realistic scenes has also undergone rapid development. Presentation graphics systems, keyframe-based editors, and virtual reality-based interactive tools for a variety of purposes have been designed. However, physical realism is missing from these systems. The principal result of this dissertation is the design and implementation of the Asgard animation system, an editor for creating physically based 3D animation. Asgard provides the user with a flexible multiple representation editing interface which allows both direct manipulation graphical definition and modification of the scene and textual editing of a formal description of the objects, forces, and other parameters of the animation. Multiple instances of each type of view can be created, all of which are synchronized. Such an interface allows the user to utilize the most convenient and effective tools for each task in the definition of the scene. Asgard also includes a differential equation solution technique that is adapted to the problem of physically based animation, which uses an event-driven scheduling algorithm to take maximum advantage of the differing time-varying properties of different components in the scene while at the same time minimizing the penalties involved with collision detection and response. This algorithm partitions the state equation graph of the scene into strongly connected components, which also allows Asgard to preserve as much previously computed data as possible when editing changes are made by the user. Asgard is part of the multi-media document processing system Ensemble. Animated scenes can be integrated with multi-media documents, as well as developed on their own.

"Speak Useful Words Or Say Nothing" Joseph Harris, 2008. This selection by Susan E. Deskis and Thomas D. Hill of twelve of Joseph Harris's most important essays underscores the range of his work from critical readings of canonical texts to philological elucidation of Old Norse and Old English literary works to discussions of larger theoretical issues such as oral theory. One of the central problems of medieval literary scholarship is the aesthetics of traditional and oral literature and how and whether one can meaningfully discuss the literary history of an oral genre. Harris's studies of such topics as the Old Norse short narrative and of the Masterbuilder tale focus precisely on such problems and offer brilliant

readings of specific texts as well as models of literary historical discourse *Speak Useful Words or Say Nothing* also shows that Harris's work frequently bridges the divide between the Latin and Christian sources and the native vernacular traditions that together found their way into Old Norse and Old English literature For more about the *Islandica* series visit <http://cip.cornell.edu/Islandica> **Charter**, 1999 [Outlook](#) Alfred Emanuel Smith, Francis Walton, 1890 **The Garden**, 2003
