Industrial Unit Processes Bela G. Liptak, 2020-07-09 In Optimization of Industrial Unit Processes the term optimization means
the maximizing of productivity and safety while minimizing operating costs In a fully optimized plant efficiency and
productivity are continuously maximized while levels temperatures pressures or flows float within their allowable limits This
control philosophy differs from earlier approaches where levels and temperatures were controlled at constant values and
plant productivity was only an accidental uncontrolled consequence of those controlled variables With this approach the
sides of a multivariable control envelope are the various constraints while inside the envelope the process is continuously
moved to maximize efficiency and productivity Because one must understand a process before one can control it let alone
optimize it Optimization of Industrial Unit Processes discusses the personality and characteristics of each process in term of
its time constants gains and other unique features This book provides information for engineers who design or operate
industrial plants and who seek to increase the profitability of their plants It recognizes that all industrial processes involve
operations such as material transportation heat transfer and reactions Therefore each plant consists of a combination of
basic unit operations and can be optimized by maximizing the efficiency and minimizing the operating cost of the individual
unit operations from which it is composed Optimization of Industrial Unit Processes discusses real world processes where
pipes leak sensors plug and pumps cavitate offering practical solutions to real problems Each control system described in the
book works illustrating the state of the art in controlling a particular unit operation This second edition reflects the continual
improvement and evolution of control systems as well as anticipates future advances Bela G Liptak speaks on Post Oil Energy
