Children's Source Monitoring:

Children's Source Monitoring Kim P. Roberts, Mark Blades, 2000-06-01 There are many aspects of life which require us to distinguish between memories of different events such as deciding whether you locked the door or only intended to lock the door Source monitoring or identifying the source of a particular memory was the event experienced related by someone else or simply imagined is a cognitive skill that develops across the life span In this book the first to integrate research on children's source monitoring readers will find an accessible overview of source monitoring theory and findings from the research programs of leading investigators in this area The programs of research cut across different methodologies e.g. nomothetic individual differences clinical and are applied to a wide range of issues in children's lives Particular emphasis is placed on the effects of source monitoring on eyewitness memory and identification learning and knowledge and the development of a theory of mind

Roberts, Mark Blades, 2000 In this book the first to integrate research on children's source monitoring readers will find an accessible overview of source monitoring theory and findings from the research programs of leading investigators in this area The programs of research cut across different methodologies e.g. nomothetic individual differences clinical and are applied to a wide range of issues in children's lives

Children's Source Monitoring and the Role of Attentional Focus at Encoding Stacie L. Kovacs, 2006 This research was an examination of how children's encoding focus at the time of an event affects later source monitoring decisions Four and 6 year old children watched a video of two speakers making various statements The children were directed to either focus on how they felt about what was being said Emotional self focus how the speakers felt about what they were saying Emotional other focus perceptual features about themselves Perceptual self focus perceptual features about the speakers Perceptual other focus or given no particular encoding directions No focus control The results suggested that emotional processing during an event is more influential on source monitoring decisions than perceptual processing Furthermore the results indicate the mechanisms by which emotional processing affects later source judgments varies as a function of the direction of the focus i.e. inward or outward We also examined how changes in binding processes correspond to developments in source monitoring Six year olds binding performance and source monitoring scores were positively related

Developmental Changes in Source Monitoring in Young Children Uta Kraus, 2012-04 One of the most amazing things in early development is how children find their way in their growing number of memories How is it possible for example that a young child can vividly remember a specific dialog and the grips carried out during building a stone dam together with another child that has been met once before In remembering such experiences it is not only necessary to

remember the specific event its place its course and the persons that were present but it is also necessary to somehow remember who said what and who did what In two experiments I examine how young children learn to differentiate between the person sources of their memories and what favorable conditions and factors are for such early source monitoring abilities The book is addressed to everybody who is fascinated by the question of how young children differentiate between the sources of their memories *Enhancing Young Children's Source Monitoring* Angela C.
