

over from the dampers spring resulting in a moment of spring pressure. As bearing pressure is gradually released from the spring center, the outer edge of the spring face spreads, pushing the pressure plate into closer contact with the clutch disc. As the disc and plate move closer together, friction between the two increases and slippage is reduced until, when full spring pressure is applied, the fully releasing pedal, the speed of the disc and plate are the same. The steps of slippage, creating a direct connection between the plate and disc which results in the transfer of power from the engine to the transmission. The clutch disc is now rotating with the pressure plate at engine speed and, because it is applied to the transmission shaft, the shaft now turns at the same engine speed. Understanding clutch operation can be rather difficult at first, if you're not well-versed after reading this, consider the following analogy: The action of the diaphragm spring can be compared to that of an old car bottom. The bottom of an old car is shaped very much like the clutch diaphragm spring and pushing it on the car bottom and then releasing it produces a similar effect. As increased weight, the clutch pedal spring pressure full release of the pedal and release linkage slack due to wear. As the linkage wears, clutch free-pedal travel will increase and horsepower will decrease as the clutch wears. First travel to clutch diaphragm bearing hub.

The diaphragm spring type clutches used in Cadillacs are available in two different designs, flat diaphragm springs or leaf springs. The leaf design are best used to create a centrifugal load causing quick re-engagement at higher engine speeds. This design enables pressure plate load to increase as the clutch disc wears and makes low pedal effort possible even with a heavy-duty clutch. The diaphragm bearing used with the leaf design drops in 1/4 in. long and is shorter than the bearing used with the finger design. These bearings are not interchangeable. If the finger bearing is used with the leaf design clutch, free-pedal travel will not exist. This results in clutch slippage and rapid wear.

The transmission covers the gear cuts between the engine and rear wheels. It can be shifted to change engine speed as driving conditions and loads change. The transmission allows disengaging and reversing power from the engine to the wheels.

CLUTCH CROSS-SHAFT LUBRICATION

Once every 20,000 miles, or once if you feel when the pedal is in the linkage area, remove the plug, install a grease and lubricate with a water-resistant EP SAE #2 Penetration chassis lubricant.

Removal

1. Support engine and remove the main screws.
2. Disconnect the clutch link push rod and spring.
3. Remove the flywheel bearing.
4. Slide the clutch link from the ball stud and remove the link from the disc back the ball stud is threaded into the clutch bearing and may be replaced, if necessary.
5. Install an alignment tool to support the clutch assembly during removal. Mark the flywheel and clutch cover for reinstallation.
6. Loosen the clutch-to-flywheel mounting pressure is released. Remove the ball and clutch assembly.

Installation

1. Clean the pressure plate and bearing face.
2. Support the clutch disc and pressure plate with an alignment tool. The drive pin is installed with the damper springs on the engine side. On some GM flywheels, the clutch disc is installed in a reverse manner with the damper springs to the flywheel side.
3. Turn the clutch assembly over the mark on the cover line up with the mark on the flywheel, then install the ball. Tighten down evenly and gradually to avoid distortion.
4. Remove the alignment tool.
5. Lubricate the ball socket and link fingers at the release bearing end with light making-point grease. Lubricate the cover on the inside of the diaphragm bearing and diaphragm link areas with a light coat of graphite grease.
6. Install the clutch link and disc back on the bearing. Install the diaphragm bearing to the diaphragm link. Install the flywheel bearing. Install the transmission.
7. Connect the link push rod and spring. Lubricate the spring and pushrod ends.
8. Adjust the shift linkage and disc pedal free play.

Linkage Inspection

Linkage may have all the symptoms of going bad when the pedal is in the linkage. To avoid the unnecessary replacement of a clutch, make the following linkage checks:

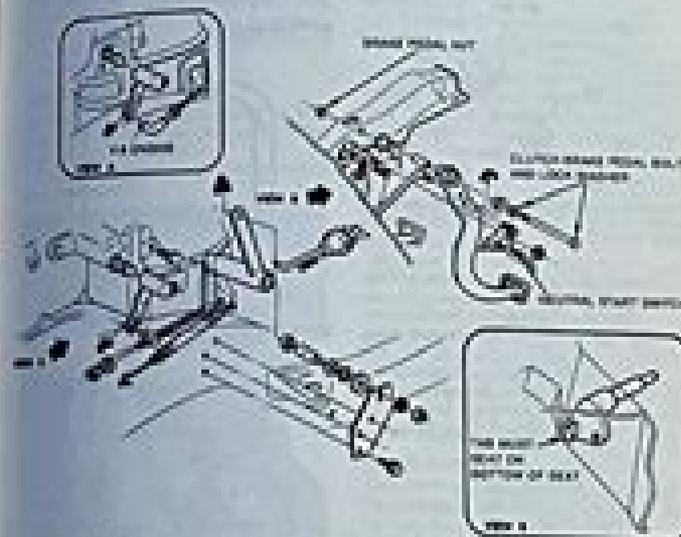

1. Start the engine and depress the clutch pedal until it is about 1/2 in. from the clutch fork and move the shift lever between first and second. The shift lever between first and second on a four-speed manual should be done several ground times. If this can be done several ground times, if the shifting is not a releasing shift, if the shifting is not smooth, the clutch is not releasing fully enough, the clutch is not releasing fully enough and adjustment is necessary.
2. Check the condition of the clutch and bearings for signs of sticking or irregular loadings for signs of sticking or irregular wear.
3. Check the diaphragm bearing link for proper installation on the ball stud. The ball stud possibly be pulled off the ball if not properly lubricated.
4. Check the cross-shaft levers for the wire or damage.
5. Check the air for leaks or damaged

water leaks. Bad water pressure can cause the engine to shift under acceleration and load the clutch linkage at the cross-shaft. There must be some clearance between the cross-shaft and motor mount.

1. Check the diaphragm bearing clearance between the clutch spring fingers and the lower bearing surface on the transmission. If there is no clearance, the link can be improperly installed on the ball stud or the clutch disc may be worn out.

Linkage Adjustment

Only one adjustment is necessary to compensate for all normal clutch wear. Depress the clutch pedal and slowly release it. If adjusted correctly, the diaphragm bearing should begin to disengage the clutch diaphragm spring levers when the top of the pedal pad is 1.1/4 in. from the floor mat. The car should begin to move forward. If clutch engagement begins at a point noticeably greater than 1 1/4 in. from the floor mat or less than 1 in. from
