**Chimpanzees and Other Animals That Use Tools and Weapons** Vic Kovacs, 2015-07-15 Chimpanzees don't monkey around when it comes to using tools. Readers will delight in this book about animals that use tools and weapons to keep them safe and make life easier. These highly intelligent animals include crows, dolphins, gorillas, and of course the smart chimpanzee. Readers are given an overview of each animal including its anatomy, habitat, and social structure before learning about the tools they use and what they can do. Vivid visuals and engaging text will grab the attention of even the most reluctant reader as they gain an understanding of animal behavior and ecosystems. *Jane Goodall's Animal World, Chimps* Jane Goodall, 2012-05-18 Introduces the physical characteristics, behavior, habitat, reproduction, and life cycle of the chimpanzee. How do chimps live their daily lives? What do they eat? How do they rear their young? The answers to these and many other questions are found in this fascinating book. Jane Goodall, one of the world's foremost naturalists, presents her ANIMAL WORLD series, eight books that explore the wonders of the world's wildlife. The books aim to help children understand more about the animal world because only when we understand can we care, only when we care can we help, and only when we help can the animals be saved. [The Animal Mind](#) Kristin Andrews, 2014-10-30 The study of animal cognition raises profound questions about the minds of animals and philosophy of mind itself. Aristotle argued that humans are the only animal to laugh, but in recent experiments rats have also been shown to laugh. In other experiments dogs have been shown to respond appropriately to over two hundred words in human language. In this introduction to the philosophy of animal minds, Kristin Andrews introduces and assesses the essential topics, problems, and debates as they cut across animal cognition and philosophy of mind. She addresses the following key topics: what is cognition and what is it to have a mind? What questions should we ask to determine whether behaviour has a cognitive basis? The science of animal minds explained: ethology, behaviourist psychology, and cognitive ethology. Rationality in animals, animal consciousness, what does research into pain and the emotions reveal? What can empirical evidence about animal behaviour tell us about philosophical theories of consciousness? Does animal cognition involve belief and concepts? Do animals have a Language of Thought? Animal communication: other minds, do animals attribute mindedness to other creatures? Moral reasoning and ethical behaviour in animals, animal cognition and memory. Extensive use of empirical examples and case studies is made throughout the book. These include Cheney and Seyfarth's vervet monkey research, Thorndike's cat puzzle boxes, Jensen's research into humans and chimpanzees and the ultimatum game, Pankseep and Burgdorf's research on rat laughter, and Clayton and Emery's research on memory in scrub jays. Additional features such as chapter summaries, annotated further reading, and a glossary make this an indispensable introduction to those teaching philosophy of mind, animal cognition. It will also be an excellent resource for those in fields such as ethology, biology, and psychology. [How Animals Think](#) Rebecca Steffoff, 2013-08-01 Birds that are smarter than a fifth grader, smart enough to do math, that is, chimps that use tools. These are just two examples

of the amazing skills of the animals all around us In this jovial book award winning author Rebecca Steffoff tells us not just that animals are intelligent but explains how researchers have discovered how smart they are Readers will learn the languages of chimps and the mental maps of birds as well as the disputes that have arisen over the years about the very idea of animal intelligence *How Animals Communicate* Rebecca Steffoff,2013-08-01 Animals communicate through a myriad of ways including body language and pheromones This thoughtful book surrounding ethology and how animals communicate through smell taste sight sound and feel reveals the secrets and science behind animals Elephants will show affection with each other by entwining their trunks Kangaroos and rabbits thump their hind legs to warn others of impending danger Explanative text by award winning author Rebecca Steffoff and an extensive bibliography are included along with key scientific terms and phrases Step by step guidance is provided for scientific observation of animal behavior which can create an energized and thought provoking classroom experience *The Chimpanzee Family Book* Jane Goodall, **Chimpanzee Politics** Frans B. Waal,2007-09-30 The first edition of Frans de Waal s *Chimpanzee Politics* was acclaimed not only by primatologists for its scientific achievement but also by politicians business leaders and social psychologists for its remarkable insights into the most basic human needs and behaviors Still considered a classic this updated edition is a detailed and thoroughly engrossing account of rivalries and coalitions actions governed by intelligence rather than instinct As we watch the chimpanzees of Arnhem behave in ways we recognize from Machiavelli and from the nightly news de Waal reminds us again that the roots of politics are older than humanity **Chimpanzee Cultures** Richard W. Wrangham,1996 Compares and contrasts the ecology social relations and cognition of chimpanzees bonobos and occasionally gorillas **My Life with the Chimpanzees** Jane Goodall,2016-10-20 Jane Goodall s adventures with the chimpanzees and the important discoveries she has made about them have gained her worldwide recognition Now she tells her exciting story in her own words When Jane Goodall was twenty six years old she ventured into the forests of Africa to observe chimps in the wild On her expeditions she braved the dangers of the jungle and survived encounters with leopards and lions in the African bush And she got to know an amazing group of wild chimpanzees intelligent animals whose lives in work and play and family relationships bear a surprising resemblance to our own Jane Goodall has also written the bestseller *In the Shadow of Man* and *The Chimpanzee Family Book* In 1977 she established the Jane Goodall Institute for Wildlife Research Education and Conservation to promote animal research throughout the world SUMMARY A DREAM COME TRUE From the time she was a girl Jane Goodall dreamed of a life spent working with animals Finally she had her wish When she was twenty six years old she ventured into the forests of Africa to observe chimpanzees in the wild On her expeditions she braved the dangers of the jungle and survived encounters with leopards and lions in the African bush And she got to know an amazing group of wild chimpanzees intelligent animals whose lives in work and play and family relationships bear a surprising resemblance to our own Jane Goodall s adventures with the chimps and the important discoveries she has made about them have gained her
