The China Path to Economic Transition and Development
Yinxing Hong,2016-04-01 This book by the renowned Chinese scholar Dr Yinxing Hong provides the reader with a perceptive analysis of what has worked in China s development model Over the past 30 years China has experienced a remarkable economic rise but it now faces the challenge of switching the drivers of this economic growth which have proven so successful The path has not been an easy one and many challenges lie ahead However the rise of the Chinese economy has been the most significant global development in recent years Is there a specific Chinese model How was the Chinese transition from a Soviet style economic structure to one that is more open to market influences and the global market achieved In 15 essays Dr Hong provides fascinating insights to these and other key questions The essays cover the challenges involved in transition and how the market oriented reforms progressed what the consequences of the transition were for public goods provision and how China opened up its economic system The essays in Part II address the remaining challenges facing rural areas trying to develop a more consumer driven economic base and how to effectively modify the model of economic development This book provides a sound basis for policymakers and scholars alike as well as anyone who wants to get an insider s view of the progress and challenges faced by China s economic development

Winning at the Turning Point Fulin Chi,2019-10-09 This book by influential policymaker Chi Fulin lays out in

issue oriented and detailed chapters at a time when China is at a crossroads exactly how the government plans to deal with the social political and economic issues the world s second largest economy faces From managing the decline of industry to urbanization to managing consumption to social security and education Chi offers a roadmap for the years ahead This book will be particularly fascinating to Western scholars of China who speculate on the inner workings of the Chinese policymaking elite with the ambition of China s central planners here laid out for the world to see *China's Economic Development* Chu-yuan Cheng,2019-03-13 How has the government of the PRC transformed traditional economic institutions into a socialist central planning system What has been the impact of this transformation on China s economic growth What is the essence of the Chinese development model and how successfully has it functioned during the past three decades What are the prospects for t **China's Third Economic Transformation** Ross Garnaut,Ligang Song,2004 In an era of dramatic transformation this book examines the role of the private sector in China s economic growth controversially suggesting that it has been driving the reform *China's Economic Transformation and Poverty Reduction Over the Years* Maria Ana Lugo,Martin Raiser,Ruslan Yemtsov,2022 The present document examines the role of social and economic transformation in the process of poverty reduction in China China s economic growth and poverty reduction over the past 40 years are historically unprecedented both in speed and scale Between 1978 and 2018 China s economy grew at an annual rate of 9.5 percent twice as fast as the other developing regions of the World The proportion of those living in poverty in rural areas fell from 97.5 percent to less than one percent over this period There are 765 million fewer poor people in China in 2019 than they were in 1980 This means that China alone accounts for three quarters of the total reduction in global extreme poverty in that period Although China s growth rate will continue to slow in the coming decades the scope for economic convergence through structural transformation has not yet been fully exhausted Further urbanization and associated productivity increases can continue to play a critical role for poverty reduction in China However for progress to be sustained a number of adjustments to policy will be needed *Keep Reforming: China's Strategic Economic Transformation* Zhong Xu,2020-10-21 This book is about China s economy transformation Currently China s macro leverage ratio has been effectively controlled the central market interest rate one year fixed interest rate has gone down and liquidity is now relatively abundant However financial institutions are generally reluctant to lend the local governments are unwilling to act and the fact that liquidity released by the central bank cannot be effectively transmitted to the real economy is leading to a contraction of credit and higher financing costs for private enterprises Meanwhile the downturn in the internal economic cycle has been exacerbated by the external shocks caused by frictions in Sino US trade and this set of circumstances has contributed to the polarization of expectations regarding China s real economic prospects and policy trends as seen for example in the questions and discussions about policy trends relevant to the private economy Indeed one might claim that the current confusion of expectations even exceeds that of 2008 when the international financial crisis breaks out From a dialectical perspective the

more pessimistic expectation of economic trend the easier it is to build consensus on reform and the more remarkable actual effects of reform which must be based on a comprehensive understanding of the phased characteristics of China's economic development. In this book, based on the experience working in the central bank of China, the author argues that China's policy should focus on internal demand. In the coming period, China needs to persevere in the market orientation, step up reform and opening up, and create a favorable business environment. This book represents the following opinions: First, to reach a common understanding of the medium and high economic growth and avoid the dream of high growth. Second, to stick to supply-side structural reform, accelerate economic transformation and structural adjustment, and further unleash the reform dividends and growth potential. The long-term and structural problems cannot be attributed to short-term and cyclical problems. Third, the challenges of external shocks could be also regarded as opportunities which include but not limited to accelerate reform to improve property rights protection, state-owned capital management, corporate governance, income distribution, and social security. Fourth, whenever the trade friction happens, a multilateral framework is always helpful.

China's 40 Years of Reform and Development: 1978-2018 Ross Garnaut, Ligang Song, Cai Fang, 2018-07-19. The year 2018 marks 40 years of reform and development in China, 1978-2018. This commemorative book assembles some of the world's most prominent scholars on the Chinese economy to reflect on what has been achieved as a result of the economic reform programs and to draw out the key lessons that have been learned by the model of growth and development in China over the preceding four decades. This book explores what has happened in the transformation of the Chinese economy in the past 40 years for China itself as well as for the rest of the world and discusses the implications of what will happen next in the context of China's new reform agenda. Focusing on the long-term development strategy amid various old and new challenges that face the economy, this book sets the scene for what the world can expect in China's fifth decade of reform and development. A key feature of this book is its comprehensive coverage of the key issues involved in China's economic reform and development. Included are discussions of China's 40 years of reform and development in a global perspective, the political economy of economic transformation, the progress of marketisation and changes in market-compatible institutions, the reform program for state-owned enterprises, the financial sector and fiscal system reform, and its foreign exchange system reform, the progress and challenges in economic rebalancing and the continuing process of China's global integration. This book further documents and analyses the development experiences including China's large-scale migration and urbanisation, the demographic structural changes, the private sector development, income distribution, land reform, and regional development, agricultural development, and energy and climate change policies.
