Artificial Intelligence Its Scope And Limits:

Artificial Intelligence: Its Scope and Limits J.H. Fetzer,2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and to computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time The perspective that prevails in artificial intelligence today suggests that the theory of computability defines the boundaries of the nature of thought precisely because all thinking is computational This paradigm draws its inspiration from the symbol system hypothesis of Newell and Simon and finds its culmination in the computational conception of language and mentality The standard conception represented by these views is subjected to a thorough and sustained critique in the pages of this book Employing a distinction between systems for which signs are significant for the users of a system and others for which signs are significant for use by a system I have sought to define the boundaries of what AI in principle may be expected to achieve

in AI are concerned with the issues of consciousness human subjectivity creativity etc Cognitive Science and AI argue that consciousness can be artificially created and comprehended in the function of robots The robotic activities explain the mechanism involved in computation language processing sensing the information etc Contrary to this thesis the philosophical study tries to show that human consciousness thinking imagination etc are much larger concepts and need to be delved into in the broad theoretical framework This book is a critique of the mechanistic theory of mind It shows the basic foundation of AI and its limitations in explaining the activities of the human mental life Machine functionalism fails to account for the subjective nature of consciousness and the creativity involved in the conscious acts There are two aspects of this thesis the epistemological and the metaphysical Epistemologically the subject of consciousness intimately knows the raw feelings or the qualia Metaphysically speaking however the raw feelings are real in the sense that they are part of the furniture of the mental world Therefore we can hardly deny that the mental world is real
