Applications of Artificial Intelligence 1993 : Knowledge-based Systems in Aerospace and Industry Ramasamy Uthurusamy,1993 *Artificial Intelligence and Exponential Technologies: Business Models Evolution and New Investment Opportunities* Francesco Corea,2017-01-11 Artificial Intelligence is a huge breakthrough technology that is changing our world. It requires some degrees of technical skills to be developed and understood so in this book we are going to first of all define AI and categorize it with a non technical language. We will explain how we reached this phase and what historically happened to artificial intelligence in the last century. Recent advancements in machine learning neuroscience and artificial intelligence technology will be addressed and new business models introduced for and by artificial intelligence research will be analyzed. Finally we will describe the investment landscape through the quite comprehensive study of almost 14 000 AI companies and we will discuss important features and characteristics of both AI investors as well as investments. This is the Internet of Things era. AI is revolutionizing the world we live in. It is augmenting the human experiences and it targets to amplify human intelligence in a future not so distant from today. Although AI can change our lives it comes also with some responsibilities. We need to start thinking about how to properly design an AI engine for specific purposes as well as how to control it and perhaps switch it off if needed. And above all we need to start trusting our technology and its ability to reach an effective and smart decision.
