Innovations in Multi-Agent Systems and Application - 1 Dipti Srinivasan, 2010-08-10 This book provides an overview of multi agent systems and several applications that have been developed for real world problems Multi agent systems is an area of distributed artificial intelligence that emphasizes the joint behaviors of agents with some degree of autonomy and the complexities arising from their interactions Multi agent systems allow the subproblems of a constraint satisfaction problem to be subcontracted to different problem solving agents with their own interest and goals This increases the speed creates parallelism and reduces the risk of system collapse on a single point of failure Different multi agent architectures that are tailor made for a specific application are possible They are able to synergistically combine the various computational intelligent techniques for attaining a superior performance This gives an opportunity for bringing the advantages of various techniques into a single framework It also provides the freedom to model the behavior of the system to be as competitive or coordinating each having its own advantages and disadvantages *Emerging Artificial Intelligence Applications in*

Weise, Zbigniew Michalewicz, 2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book Variants of Evolutionary Algorithms for Real World Applications aims to promote the practitioner's view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re-visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation
