Toplak, Joshua Weller, 2016-11-25 Children face an overwhelming amount of information and a range of different choices every day and so there has never been a more important time to understand how children learn to make judgments and decisions in our modern world *Individual Differences in Judgment and Decision Making* presents cutting edge developmental research to advance our knowledge and understanding of how these competencies emerge Focusing on the role of individual differences the text provides a complementary theoretical approach to understanding the development of judgment and decision making skills and how and why these competencies vary within and between different periods of development Sampling a diverse set of developmental paradigms and measures as well as considering typical and atypically developing samples this volume provokes thinking about how we can support our children and youth to help them make better choices Drawing on the expertise of a range of international contributors this book will be of interest to students and researchers of thinking and reasoning from both cognitive and developmental psychology backgrounds *Children's Thinking* David Bjorklund, 2011-01-21 A comprehensive book supported by extensive research studies and data Bjorklund's text presents the broadest coverage of topics in cognitive development Unlike other books Bjorklund shows readers how developmental function can help explain individual differences in cognition by covering both the typical pattern of change in thinking observed over time and the individual differences in children's thinking in infancy and childhood A major theme of this book is the continuous transaction between the embodied child embedded in a social world although a child is born prepared to make some sense of the world his or her mind is also shaped by forces in the physical and social environment Important Notice Media content referenced within the product description or the product text may not be available in the ebook version *Studyguide for Children's Thinking* Cram101 Textbook Reviews, 2008-04 Never HIGHLIGHT a Book Again Virtually all of the testable terms concepts persons places and events from the textbook are included Cram101 Just the FACTS101 studyguides give all of the outlines highlights notes and quizzes for your textbook with optional online comprehensive practice tests Only Cram101 is Textbook Specific Accompany's 9780534622459 **Developmental Variations in Learning** Victoria J. Molfese, 2001-10-01 Developmental changes in cognitive abilities in childhood have long been of interest to researchers across many fields including behavioral sciences communications education and medicine With the publication of research findings showing individual differences in the development of children's learning skills has come the realization that models methodologies and analysis approaches that

include consideration of individual differences are needed It has brought an increase in research collaborations among experts in different fields who bring different approaches together in studies of cognitive abilities This work has yielded a growing body of knowledge about how children with normal abilities and those with developmental disorders learn skills in social competency develop decision making and planning abilities and acquire language skills and the skills needed for reading and writing More recently researchers have sought to use this body of knowledge as a basis for the early identification of children at risk for cognitive delays and for the development and evaluation of intervention approaches The chapters in this book review literature in five areas of cognition and provide theory and research based information on the applications of research findings and intervention approaches Throughout the chapters information on the interactions of different cognitive abilities and the role of individual differences in development that influences development assessments is included

Children's Thinking Bjorklund,1994-11 **Individual Differences and Cognition** Douglas K. Detterman,1993 This volume provides a sample of the research on individual differences in different content areas of study The first section presents authors whose concern is with development at some stage The second section presents chapters on exceptionality a chapter on learning disability and another on gif

Emerging Minds Robert S. Siegler,1998-10-29 How do children acquire the vast array of concepts strategies and skills that distinguish the thinking of infants and toddlers from that of preschoolers older children and adolescents In this new book Robert Siegler addresses these and other fundamental questions about children s thinking Previous theories have tended to depict cognitive development much like a staircase At an early age children think in one way as they get older they step up to increasingly higher ways of thinking Siegler proposes that viewing the development within an evolutionary framework is more useful than a staircase model The evolution of species depends on mechanisms for generating variability for choosing adaptively among the variants and for preserving the lessons of past experience so that successful variants become increasingly prevalent The development of children s thinking appears to depend on mechanisms to fulfill these same functions Siegler s theory is consistent with a great deal of evidence It unifies phenomena from such areas as problem solving reasoning and memory and reveals commonalities in the thinking of people of all ages Most important it leads to valuable insights regarding a basic question about children s thinking asked by cognitive developmental and educational psychologists How does change occur

Executive Function in Childhood Claire Hughes,Laura Katus, Lucy Cragg,2023 *Executive Function in Childhood Development Individual Differences and Real Life Importance* examines executive function during infancy and early childhood through the lenses of developmental psychology neuropsychology and educational psychology Co authored by three experts in the field this concise book is aimed at early undergraduate students and as well as providing an up to date overview of executive function illustrates a range of core concepts around psychological assessment of infants and children including neuroimaging The text is accessible for students with limited prior knowledge and will enable them to acquire more in depth understanding from literature in the field

Children's Thinking Robert Siegler, 2013-10-28 First published in 1978 In 1963 John Flavell posed one of the truly basic questions underlying the study of children's thinking his question was simply What develops This volume holds the papers from the 13th Annual Carnegie Cognition Symposium held in May 1977 that considering what progress had been made toward answering this question in the past 15 years

Children's Thinking Robert S. Siegler, Martha Wagner Alibali, 2005 This book examines topics such as the possibility of multiple intelligences and discusses how children learn reading writing and mathematical skills and details the learning abilities of blind deaf gifted and retarded children

Individual Differences in Three Domains of Cognitive Development Wallace Edward Dixon, 1990

The Child as Thinker Sara Meadows, 2006 This second edition of *The Child as Thinker* has been thoroughly revised and updated to provide an informed and accessible overview of the varied and extensive literature on children's cognition Both theory and research data are critically examined and educational implications are discussed After a brief discussion of the nature and subject of cognition Sara Meadows reviews children's thinking in detail She discusses the ways children remember and organise information in general the acquisition of skills such as reading writing and arithmetic and the development of more complex reasoning as children grow to maturity As well as studies that typically describe a generalised child the book also reviews some of the main areas relevant to individual differences in normal cognitive development and critically examines three major models of cognitive development In outlining the work of Piaget information processing accounts and neo Vygotskian theories she also evaluates their different explanations of cognitive development and their implications for education Finally the book examines biological and social factors that may be involved in normal and suboptimal cognitive development Sara Meadows provides an important review of the crucial issues involved in understanding cognitive development and of the new data and models that have emerged in the last few years This book brings together areas and approaches that have hitherto been independent and examines their strengths and weaknesses *The Child as Thinker* is essential reading for all students of cognitive development

Developing Theory of Mind and Executive Functions from Three- to Five-years-old, 2007 In this dissertation I consider traditional approaches to developmental questions and suggest new methods for analyzing variability in individual children In chapter I I review the literature on children's reasoning about mental states such as beliefs and desires from a very early age This ability is often called theory of mind In chapter II I explore the suggestion that change in a preschooler's theory of mind is motivated by change in their executive functions which reflect the child's ability to manipulate abstract representations To this end a new measure of cognitive development in executive functions is tested empirically A correlation between theory of mind performance and executive function performance is demonstrated In chapter III I go beyond correlations in groups to address the question of individual development Current theories of how theory of mind develops do not make any specific predictions about what developmental change looks like in individuals Is change abrupt or is it gradual Is there a universal path to mature performance or are there inter and intra individual

differences A new method for statistically analyzing variability in individual children s performance is proposed Findings are discussed in terms of a general theoretical framework for theory of mind development in chapter IV

Developing Thinking Sara Meadows,2017-09-13 How children s thinking develops and how it can be developed in education are among the most important questions in psychology Studies of cognition in adults need to be supplemented by the developmental perspective which often transforms them Educational objectives will be most efficiently achieved only if we understand children s thought Like all important problems the nature of developing thinking is far from simple A wide variety of different approaches have been taken to it and in the few years before publication had come together to produce new understanding and new ideas Originally published in 1983 each chapter in this book addresses itself to major issues in the area and the advances that were being made at the time

Individual Differences and the Development of Perceived Control Ellen A. Skinner,Melanie J. Zimmer-Gembeck,James P. Connell,1998 One of the strongest predictors of children s school performance are individual differences in perceived control those beliefs about how effective the self can be in producing desired outcomes Drawing perspectives from both developmental and individual differences research this longitudinal study documents the cycles in which children who develop optimal profiles of control are more actively engaged and have better academic success or in contrast how children may doubt their capacities experience lower scholastic achievement and believe in the power of luck or unknown forces Further the results show how these cycles may change with age and suggest ways to improve children s perceived control

Theory of Mind Scott A. Miller,2012-08-21 This is the first book to provide a comprehensive review of the burgeoning literature on theory of mind TOM after the preschool years and the first to integrate this literature with other approaches to the study of social understanding By highlighting the relationship between early and later developments the book provides readers with a greater understanding of what we know and what we still need to know about higher order TOM Although the focus is on development in typical populations development in individuals with autism and in older adults is also explored to give readers a deeper understanding of possible problems in development Examining the later developments of TOM gives readers a greater understanding of Developments that occur after the age of 5 Individual differences in rate of development and atypical development and the effects of those differences The differences in rate of mastery which become more marked and therefore more informative with increased age What it means to have a good theory of mind The differences between first and second order theory of mind development in preschoolers older children adolescents and adults The range of beliefs available to children at various ages providing a fuller picture of what is meant by understanding of belief After the introduction the literature on first order developments during the preschool period is summarized to serve as a backdrop for understanding more advanced developments Chapter 3 is devoted to the second order false belief task Chapters 4 and 5 introduce a variety of other measures for understanding higher level forms of TOM thereby providing readers with greater insight into other cognitive and social developmental outcomes Chapter 6 discusses the

relation between children's TOM abilities and other aspects of their development. Chapters 7 and 8 place the work in a historical context. First, the research on the development of social and mental worlds that predated the emergence of TOM is examined. Chapter 8 then provides a comparative treatment of the two literatures and how they complement one another. Ideal as a supplement in graduate or advanced undergraduate courses in theory of mind, cognitive development, or social development taught in psychology and education. Veteran researchers will also appreciate this book's unique synthesis of this critical research.
