

Practice tip: How to assess and support students with reading and speech sound difficulties

A school-aged child with a history of a speech sound disorder is at a significantly increased risk of reading difficulties.

About 25-30%

of children with reading difficulties have a history of speech sound disorders in preschool.

When assessing the reading skills of a school-aged child with a persistent speech sound disorder (or history), professionals need to go beyond just checking grapheme-phoneme links and word recognition skills, and assess:

- **motor-speech production skills**, e.g. on phonologically complex, polysyllabic words, syllable sequencing and production tasks; and
- **oral language skills**, including vocabulary, morphology, syntax, and social use in discourse.

When supporting a student with reading difficulties and a persistent speech sound disorder (e.g. childhood apraxia of speech), we should take an integrated approach combining:

- **speech sound production practice**;
- **explicit training of phoneme-grapheme links**, and blending & segmenting skills; and
- (if needed) **explicit support for oral and written expressive language development**, including at the sentence and discourse levels.

Butler,Elaine R. Silliman,2001-12-01 The ability to use language in more literate ways has always been a central outcome of education Today however being literate requires more than functional literacy the recognition of printed words as meaningful It requires the knowledge of how to use language as a tool for analyzing synthesizing and integrating what is heard or read in order to arrive at new interpretations Specialists in education cognitive psychology learning disabilities communication sciences and disorders and other fields have studied the language learning problems of school age children from their own perspectives All have tended to emphasize either the oral language component or phonemic awareness The major influence of phonemic awareness on learning to read and spell is well researched but it is not the only relevant focus for efforts in intervention and instruction An issue is that applications are usually the products of a single discipline or profession and few integrate an understanding of phonemic awareness with an understanding of the ways in which oral language comprehension and expression support reading writing and spelling Thus what we have learned about language remains disconnected from what we have learned about literacy interrelationships between language and literacy are not appreciated and educational services for students with language and learning disabilities are fragmented as a result This unique book a multidisciplinary collaboration bridges research practice and the development of new technologies It offers the first comprehensive and integrated overview of the multiple factors involved in language learning from late preschool through post high school that must be considered if problems are to be effectively addressed Practitioners researchers and students professionally concerned with these problems will find the book an invaluable resource **Speech Impairment and Literacy Difficulties** Suze Leitao,Janet Fletcher,1999 *Helping Young Children Learn Language and Literacy* Carol Vukelich,James F.
