## **China Difference:**

*China's Monetary Policy and Interest Rate Liberalization* Wei Liao, 2014 China has been moving to a more market oriented financial system which has implications for the monetary policy environment The paper investigates the stability of the money demand function MDF in light of progress in financial sector reforms that for example have resulted in significant financial innovation so called shadow banking and more liberalized interest rates The analysis of international experience suggests that rapid development of the financial system often leads to structural shifts in the MDF For example financial innovation and liberalization alter the sensitivity of money balances to income and the interest rate For China we find that the stable long run relationship between money demand output and interest rates that existed between 2002 and 2008 disappears after 2008 This coincides with the period of rapid financial innovation especially the growth in off balance sheet and nonbank financial intermediation The results suggest that usefulness of M2 as an intermediate monetary target has declined with financial innovation and reform A result that underscores the importance of moving toward increased reliance on more price based targets such as interest rates

*Spillovers from the Maturing of China's Economy* Allan Dizioli, Mr. Benjamin L Hunt, Wojciech Maliszewski, 2016-11-15 China's transition to a new growth model continues and the impact has been felt across the globe Several trends contribute to the maturing of China's economy i structural slowing on the convergence path ii on shoring deepening and iii demand rebalancing from investment towards consumption In the short term financial stress may lead to a cyclical slowdown This paper discusses and quantifies spillovers to the global economy from these different developments The analysis is undertaken using the APDMOD and G20MOD both modules of the IMF's Flexible System of Global Models For plausible values of these developments the overall impact on the global economy is not large However the impact on China's closest trading partners and commodity exporters can be notable
