A Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware Christian Nitschke, 2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis

Shapes in Our World Moira Anderson, 2008-10-10 Identify three dimensional shapes all around the world This vibrant title gives readers practice

identifying familiar shapes like cones cylinders pentagons polygons and prisms while familiarizing them with STEM themes and more advanced geometry concepts Children will learn more about vertices symmetry and bases With each shape this book gives readers information about an example of the shape be it a building a honeycomb or a tree trunk With an accessible glossary clear mathematical diagrams practical examples and easy to read text readers will have all the tools they need to improve their geometry skills and find shapes on their own

3-D Human Modeling and Animation Peter Ratner, 1998-05-25 3 D Human Modeling and Animation fills a tremendous void that has become even more evident with the successful use of 3 D in movies like Disney s Toy Story While there has been much written about drawing the human form in relation to art commercial design and 2 D cartooning the subject of 3 D modeling and animation of the human form has been neglected at the same time that the use of 3 D tools has been exploding It is my judgment that this book will become the reference that professional and student artists and animators turn to in order to master one of the most challenging yet exciting subjects to model and animate the human form Nick Pavlovic CEO Visual Information Development Inc Monrovia CA Ideal for graphic designers artists and others 3 D Human Modeling and Animation builds a bridge from traditional figure drawing painting and sculpture to the creation and animation of figures using computer technology With a step by step approach the book leads readers through the process of modeling human figures with specific yet flexible techniques that can be applied to many different hardware software setups Separate chapters cover different areas of the body and contain everything readers need to know about proportion basic design strategies 3 D construction methods and other essential information The final chapters show how to prepare figures for animation and get them up and running and jumping walking turning and twisting Complete with illustrations helpful exercises and more 3 D Human Modeling and Animation opens up a whole new world of creative possibilities to explore
