Concept formation Douglas H. Fisher,1991 **Concept Formation** Douglas Fisher,Michael Pazzani,Pat Langley,2014

Concept Formation Knowledge and Experience in Unsupervised Learning presents the interdisciplinary interaction between machine learning and cognitive psychology on unsupervised incremental methods This book focuses on measures of similarity strategies for robust incremental learning and the psychological consistency of various approaches Organized into three parts encompassing 15 chapters this book begins with an overview of inductive concept learning in machine learning and psychology with emphasis on issues that distinguish concept formation from more prevalent supervised methods and from numeric and conceptual clustering This text then describes the cognitive consistency of two concept formation systems that are motivated by a rational analysis of human behavior relative to a variety of psychological phenomena Other chapters consider the merits of various schemes for representing and acquiring knowledge during concept formation This book discusses as well the earliest work in concept formation The final chapter deals with acquisition of quantity conservation in developmental psychology This book is a valuable resource for psychologists and cognitive scientists *Knowledge-Based Systems, Four-Volume Set* Cornelius T. Leondes,2000-07-11 The design of knowledge systems is finding myriad applications from corporate databases to general decision support in areas as diverse as engineering manufacturing and other industrial processes medicine business and economics In engineering for example knowledge bases can be utilized for reliable electric power system operation In medicine they support complex diagnoses while in business they inform the process of strategic planning Programmed securities trading and the defeat of chess champion Kasparov by IBM s Big Blue are two familiar examples of dedicated knowledge bases in combination with an expert system for decision making With volumes covering Implementation Optimization Computer Techniques and Systems and Applications this comprehensive set constitutes a unique reference source for students practitioners and researchers in computer science engineering and the broad range of applications areas for knowledge based systems **Categorization by Humans and Machines** ,1993-10-22 The objective of the series has always been to provide a forum in which leading contributors to an area can write about significant bodies of research in which they are involved The operating procedure has been to invite contributions from interesting active investigators and then allow them essentially free rein to present their perspectives on important research problems The result of such invitations over the past two decades has been collections of papers which consist of thoughtful integrations providing an overview of a particular scientific problem The series has an excellent tradition of high quality papers and is widely read by researchers in cognitive and experimental psychology [Scientific Data Mining and Knowledge Discovery](#) Mohamed Medhat Gaber,2009-09-19 Mohamed Medhat Gaber It is not my aim to surprise or shock you but the simplest way I can summarise is to say that there are now in the world machines that think that learn and that create Moreover their ability to do these things is going to increase rapidly until in a visible future the range of problems they can handle will be

coextensive with the range to which the human mind has been applied by Herbert A Simon 1916 2001 1 Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scientific data The use of computational power for data analysis and knowledge discovery in scientific disciplines has found its roots with the re-lution of high performance computing systems Computational science in physics chemistry and biology represents the first step towards automation of data analysis tasks The rationale behind the development of computational science in different areas was automating mathematical operations performed in those areas There was no attention paid to the scientific discovery process Automated Scientific Discovery ASD 1 3 represents the second natural step ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences Although early research articles have shown great successes the area has not evolved due to many reasons The most important reason was the lack of interaction between scientists and the automating systems

Jongman,1996 Cognitive Science and the Symbolic Operations of Human and Artificial Intelligence Morton Wagman,1997-09-30 This scholarly book presents and critically evaluates the outstanding contributions of both cognitive psychology and artificial intelligence to our understanding of the nature of intelligence and intelligent systems Examining conceptual thought across the domains of reasoning and logic language and analogy and scientific discovery Wagman compares human reasoning with computer reasoning Of special interest to readers is the general critique of artificial intelligence research directed toward the ultimate objective of mapping and surpassing all of human knowledge The first chapter examines the theoretical foundations of the logical approach to artificial intelligence and the centrality of declarative knowledge and the predicate calculus The artificial intelligence system CYC is critically examined with respect to its avowed objective of matching or surpassing human intelligence The second chapter focuses on the probabilistic contrast model of causal reasoning and underscores its significance as a mathematical conceptualization of human reasoning In the third chapter the ARCS Analogical Retrieval by Constraint Satisfaction system is discussed and its psychological validity is evaluated In the fourth chapter scientific heuristics characteristics of different developmental levels and differentially applied in the discovery spaces of hypotheses and experiments are analyzed in the context of the philosophy of science The fifth chapter presents the logic principles and applications of PAULINE a pragmatic language generation system and explains human language pragmatics
