Concept Of Function In Twentieth Century Architectural Criticism:

The Concept of Function in Twentieth-century Architectural Criticism Larry LeRoy Ligo, 1984 **Modernism in Design** Paul Greenhalgh, 1997-07-01 Ten new and important essays on design cover Modernism's fortunes in Germany Italy Sweden Britain Spain Belgium and the USA they range in subject matter from world fairs and everyday domestic objects to American West coast architecture and French and Italian furniture With essays by Tim Benton Gillian Naylor Penny Sparke Wendy Kaplan Clive Wainwright Martin Gaughan Guy Julier Mimi Wilms Julian Holder and Paul Greenhalgh The object of this book is to diffuse myths If modernism has in the past been both absurdly praised and absurdly damned Modernism in Design seeks to lift it out of this cycle and to demonstrate that the modern movement could offer neither Jerusalem nor Babylon In this the book succeeds admirably Designer's Journal While this collection of essays is aimed primarily at design historians and students of design history hard pressed practising designers and architects should make room for it on their bookshelves Design **Architectural Theory of Modernism** Ute Poerschke, 2016-04-20 Architectural Theory of Modernism presents an overview of the discourse on function form concepts from the beginnings in the eighteenth century to its peak in High Modernism Functionalist thinking and its postmodern criticism during the second half of the twentieth century is explored as well as today's functionalism in the context of systems theory sustainability digital design and the information society The book covers among others the theories of Carlo Lodoli Gottfried Semper Eugène Emmanuel Viollet le Duc Louis Sullivan Frank Lloyd Wright Hannes Meyer Adolf Behne CIAM Jane Jacobs Robert Venturi and Denise Scott Brown Charles Jencks William Mitchell and Manuel Castells **Philosophy and Architecture**, 2021-11-01 The Ethical Architect Tom Spector, 2012-04-17 Many believe that the moral mission of architecture has been in serious decline for the last 25 years In this important new book Tom Spector points out the dilemmas of architectural practice and offers a theoretical and practical basis for an examination and transformation of the quandaries the profession now faces What makes a good building or a good architect Are there limits to an architect's ethical or legal responsibilities in a building process where architecture plays an increasingly smaller role Is preservation a moral imperative What happens when building codes and ethical responsibilities are in conflict In The Ethical Architect Spector investigates the moral underpinnings and implications of leading architectural theories subjecting them to the analytical techniques of moral philosophy His conclusions provide a road map to help architects make the right decision in the difficult tradeoffs that confront designers on a daily basis Spector estimates that more than 100 000 decisions go into the design of an average sized building The Ethical Architect is a work of theory but refers to real buildings and real world problems It is Spector's call to arms for his profession and a must read for practicing architects and students alike *Forms and Functions of Twentieth-century Architecture: The principles of composition* Talbot Hamlin, 1952 **Architectural Theory, Le Corbusier's Legacy** David Smith Capon, 1999 The two volumes of Architectural Theory bring together the fundamental elements of architecture and present them in a new and

accessible format The books define the areas of knowledge necessary for successful design and criticism and for the first time in the history of architectural literature integrate all the concepts to form a balanced and comprehensive whole Volume One A History of the Categories in Architecture and Philosophy establishes the framework of architectural theory The author presents a systematic analysis of what constitutes good architecture in the West tracing the history of architectural theory through the metaphysics of ancient Greece the doctrines of early and medieval Christianity up to the concepts and categories of modern philosophy The twentieth century has seen more building and more analysis of building than any other Volume Two Principles of Twentieth century Architectural Theory Arranged by Category focuses on the recent fragmentation of architectural theory into distinct doctrines Formalism minimalism mannerism functionalism rationalism brutalism positivism romanticism expressionism classicism constructivism organicism modernism futurism radicalism deconstructivism historicism post modernism each movement has influenced the shape of architectural thinking over the last century Principles of Twentieth century Architectural Theory Arranged by Category analyses each in turn and places each in context The volumes are liberally illustrated with representative buildings of the period and include a glossary of terms a thesaurus an annotated guide to further reading as well as diagrammatic links connecting themes across both volumes The two volumes whether studied together or individually will prove invaluable to students of architecture and related disciplines
