## CONCEPTIONS OF GIFTEDNESS AND TALENT

*Christiane Fischer-Ontrup and Christian Fischer*

### **Chapter overview**

In this chapter, we provide a brief initial overview of the development of giftedness and talent research in different domains. In doing so, we define and compare relevant terms and concepts. This is followed by a survey of the different research approaches in this area, outlined from a psychological and educational perspective. We also highlight the models and factors that have attempted to account for gifted education and talent development in particular contexts. In the final section, we summarize the phenomenology of existing research and attempt to provide an integrated concept of research on gifted education and talent development. Taken together, the chapter provides some insight into why so many different approaches are taken and how unconcise terminology is often used in talent research.

### **Definitions of giftedness and talent**

With regard to the historical development of giftedness research, several milestones can be identified, all of which call for a discussion of the terminology and definitions of high giftedness or special talents. Modern giftedness research was launched at the turn of the twentieth century and was closely linked with the initiation of intelligence research. During that era, the German psychologist Stern (1916) introduced the term 'intelligence quotient' (IQ), which is still the dominating standardized measure to diagnose and assess a person's intellectual capacity. Stern (1928, p. 344) defines intelligence 'as a person's individual ability to employ purposeful cognitive means to confront new challenges'. Stern's IQ formed the basis for one of the first and most extensive and complex longitudinal developmental giftedness studies (Genetic Study of Genius) with more than 1,500 subjects. It began in 1921 and was carried on by Terman and colleagues, using an IQ  $> 135$  as a selection criterion (Terman & Merrill, 1937; Terman & Oden, 1948, 1967) to investigate the influence of high intelligence on the development of excellent performance. For this study, Terman refined the first standardized intelligence test developed by Binet and Simon (1908), which was then used in the survey as the Stanford-Binet Intelligence Scale (1916). Terman and colleagues discovered that a high intelligence score was not enough to predict excellent performance in intellectual domains. In addition, they learned that a distinctive motivation and a stimulating environment were essential to develop expertise that was visible, for example, in Nobel-prize laureates (Ericsson, Prietula, & Cokely, 2007).
