Concepts In Inhalation Toxicology:

Concepts In Inhalation Toxicology Roger O. McClellan, 1995-09-25 Recent developments have provided new data on the subject of inhalation toxicology requiring an update of the previous edition of this popular text Like the first this second edition explains the basic concepts and quantitative approaches in inhalation toxicology and it gives a comprehensive treatment of evaluations of respiratory responses to inhaled particles and gases The author here explores new understanding of the role of cytokines in pulmonary inflammation and risk assessment Immunologists oncologists respiratory specialists and students in those fields will find *Concepts In Inhalation Toxicology* to be essential to their practice *Inhalation Toxicology, Second Edition* Harry Salem, Sidney A. Katz, 2005-12-22 Written by internationally recognized scientists from academic industrial and governmental sectors *Inhalation Toxicology Second Edition* details the methods and materials used in the theoretical and applied aspects of inhalation toxicology The editors emphasize the relationship between the respiratory system and toxicology of inhaled substances and examine methods and measurements for improving our understanding of the basic mechanisms of effects The book delineates key issues in the field such as regulatory aspects of exposure and testing testing equipment and methods biomarkers pathology allergies and immunology irritation of the respiratory tract and risk assessment It covers the inhalation of bioaerosols and toxins ranging from anthrax to household molds as well as genomics proteomics and low level exposure toxicants such as tobacco smoke and chemical warfare agents Highlights include coverage of the Acute Exposure Guidelines and Emergence Response Guidelines and recent changes in the European and American guidelines for testing procedures The book focuses on key issues associated with airborne substances and provides critical reviews of the latest advances Presenting sophisticated concepts in a readable accessible format the book distills the latest information into practical knowledge *Handbook of Toxicology, Third Edition* Michael J. Derelanko, Carol S. Auletta, 2014-03-07 The *Handbook of Toxicology Third Edition* provides an updated practical reference source for practicing toxicologists in the pharmaceutical and chemical industries contract laboratories regulatory agencies and academia Written by experts in their specific toxicology fields the chapters provide both fundamental and applied information Topics range from General Toxicology to Genetic Toxicology Human Clinical Toxicology Histopathology Clinical Pathology Metabolism and Toxicokinetics Risk Assessment and more New to this edition Completely rewritten chapters covering immunotoxicology endocrine toxicology and reproductive and developmental toxicology providing a fresh perspective on these topics Addition of new chapters on Chemical Toxicology Pharmaceutical Toxicology Juvenile Toxicology and Safety Pharmacology Updated information dealing with Inhalation Toxicology Neurotoxicology and Regulatory Toxicology which has been consolidated into single chapters for each specialty A separate glossary with toxicological terms presented both alphabetically and by toxicological subspecialty For nearly 20 years this handbook has remained the only reference book of its kind designed to facilitate easy access to information related to the various toxicology specialties This updated edition of a popular reference

Inhalation Toxicology Harry Salem, Sidney A. Katz, 2014-08-19 The lungs provide a significant opportunity for the introduction of both therapeutic and toxic chemicals into the human body In occupational and domestic environments hazardous chemicals can enter the body through the lungs via gases aerosols and particulates from natural and anthropogenic sources Fully updated with new research and discoveries

Particle-Lung Interactions Peter Gehr, Joachim Heyder, 2000-02-18 This wide ranging comprehensive reference presents the latest developments in aerosol science and interactions between particles and the respiratory tract utilizing an inter disciplinary approach that integrates advances in physics chemistry and engineering with the epidemiological and biomedical sciences and focusing on the dynamics of particles

Experimental Immunotoxicology Ralph J. Smialowicz, Michael P. Holsapple, 1996 Immunotoxicology has emerged as a vital and expanding discipline over the past several years Although the field of human immunotoxicology is arguably still in its infancy a number of animal model systems have been well established and validated Experimental Immunotoxicology provides an update on the recent advances in the field as it relates to animals and provokes discussion on approaches to the evaluation of human immunotoxicology It is an important reference source for professionals in immunology and toxicology The book begins with an overview of the mammalian immune system and covers the important role played by animal host susceptibility models It also gives an update on immunotoxicology in sub human primates Vulnerability of bone marrow and the consequences of damage to immune function as well as chemical induced immunosuppression as a consequence of exposure to chemicals are covered Most of the chapters are organized to include a description of the profile of immunotoxicity mechanisms of immunotoxicity species comparisons and research needs

Toxicology of Inhaled Materials H.P. Witschi, J.D. Brain, 2012-12-06 This book deals with the methods and scientific basis of inhalation toxicology It describes devices and facilities needed to expose animals to inhaled particles and gases as well as approaches to estimating or measuring the fraction of the inhaled material that is retained in the respiratory tract The book then reviews the evergrowing repertoire of techniques that can be used to measure the responses elicited by the exposure Quantitative and qualitative anatomical physiological and biochemical strategies are discussed in detail We believe that the toxicology of inhaled materials is an important and timely topic for several reasons During the past decade morbidity and mortality attributable to cardiovascular disease have significantly decreased Progress in combatting cancer the second most important cause of death has been slower and lung cancer actually became the leading cause of death in men and the second leading cause of cancer death in women In addition the incidence of non neo plastic respiratory diseases such as emphysema fibrosis and chronic bronchitis has increased the past decade In the United States the National Institutes of Health NIH has recently reported that chronic obstructive pulmonary disease affects nearly 10 million persons and accounts for 59 000 deaths yearly indeed it ranks as the fifth leading cause of death Because the incidence is increasing the NIH estimates that it may become the nation s fourth or even third leading cause of death by the year 2000
