Advances and Applications of DSMT for Information Fusion. Collected Works, Volume 5 Florentin Smarandache, Jean Dezert, Albena Tchamova, This fifth volume on Advances and Applications of DSMT for Information Fusion collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics and is available in open access. The collected contributions of this volume have either been published or presented after disseminating the fourth volume in 2015 available at fs.unm.edu/DSMT/book4.pdf or www.onera.fr/sites/default/files/2015/DSMT/Book4.pdf in international conferences, seminars, workshops, and journals, or they are new. The contributions of each part of this volume are chronologically ordered. First Part of this book presents some theoretical advances on DSMT dealing mainly with modified Proportional Conflict Redistribution Rules, PCR of combination with degree of intersection coarsening techniques, interval calculus for PCR thanks to set inversion via interval analysis, SIVIA, rough set classifiers, canonical decomposition of dichotomous belief functions, fast PCR fusion, fast inter-criteria analysis with PCR and improved PCR5 and PCR6 rules preserving the quasi-neutrality of quasi-vacuous belief assignment in the fusion of sources of evidence with their Matlab codes. Because more applications of DSMT have emerged in the past years since the apparition of the fourth book of DSMT in 2015, the second part of this volume is about selected applications of DSMT mainly in building change detection, object recognition, quality of data association in tracking, perception in robotics, risk assessment for torrent protection and multi-criteria decision making, multi-modal image fusion, coarsening techniques, recommender system, levee characterization and assessment, human heading perception, trust assessment, robotics, biometrics, failure detection, GPS systems, inter-criteria analysis, group decision, human activity recognition, storm prediction, data association for autonomous vehicles, identification of maritime vessels, fusion of support vector machines, SVM, Silx, Furtif, RUST code library for information fusion including PCR rules and network for ship classification. Finally, the third part presents interesting contributions related to belief functions in general, published or presented along the years since 2015. These contributions are related with decision making under uncertainty, belief approximations, probability transformations, new distances between belief functions, non-classical multi-criteria decision making problems with belief functions, generalization of Bayes theorem, image processing, data association, entropy and cross entropy measures, fuzzy evidence numbers, negator of belief mass, human activity recognition, information fusion for breast cancer therapy, imbalanced data classification and hybrid techniques, mixing deep learning with belief functions as well.
