Concurrent Constraint Programming

- **Use constraints for communication and control between concurrent agents operating on a shared store.**
- **Two basic operations**
  - **Tell** c: Add c to the store
  - **Ask** c **then** A: If the store is strong enough to entail c, reduce to A.

(Agents) $A ::= c$

$$\text{if } (c) \; A$$

$$A, B$$

$$\{x:T; \; A\}$$

(Config) $G ::= A,...,A$

$G, \{x:T;A\} \rightarrow G, A$ (x not free in G)

$G, \text{if } (c) \; A \rightarrow G, A$ $(s(G) \vdash c)$

$[[A]]$ = set of fixed points of a closure operator

Operational semantics is complete for logical entailment of constraints.

Concurrent Constraint Programming:

    Concurrent Constraint Programming Vijay Saraswat,1993   **Objects for Concurrent Constraint Programming** Martin Henz,2012-12-06 Concurrent constraint programming ccp is a recent development in programming language design Its central contribution is the notion of partial information provided by a shared constraint store This constraint store serves as a communication medium between concurrent threads of control and as a vehicle for their synchronization Objects for Concurrent Constraint Programming analyzes the possibility of supporting object oriented programming in ccp Starting from established approaches the book covers various object models and discusses their properties Small Oz a sublanguage of the ccp language Oz is used as a model language for this analysis This book presents a general purpose object system for Small Oz and describes its implementation and expressivity for concurrent computation Objects for Concurrent Constraint Programming is written for programming language researchers with an interest in programming language aspects of concurrency object oriented programming or constraint programming Programming language implementors will benefit from the rigorous treatment of the efficient implementation of Small Oz Oz programmers will get a first hand view of the design decisions that lie behind the Oz object system   **Concurrent Constraint Programming** Vijay A. Saraswat,1993-03-22 Concurrent Constraint Programming introduces a new and rich class of programming languages based on the notion of computing with partial information or constraints that synthesize and extend work on concurrent logic programming and that offer a promising approach for treating thorny issues in the semantics of concurrent nondeterministic programming languages Saraswat develops an elegant and semantically tractable framework for computing with constraints emphasizing their importance for communication and control in concurrent programming languages He describes the basic paradigm illustrates its structure discusses various augmentations gives a simple implementation of a concrete language and specifies its connections with other formalisms In this framework concurrently executing agents communicate by placing and checking constraints on shared variables in a common store The major form of concurrency control in the system is through the operations of Atomic Tell an agent may instantaneously place constraints only if they are consistent with constraints that have already been placed and Blocking Ask an agent must block when it checks a constraint that is not yet known to hold Other operations at a finer granularity of atomicity are also presented Saraswat introduces and develops the concurrent constraint family of programming languages based on these ideas shows how various constraint systems can naturally realize data structures common in computer science and presents a formal operational semantics for many languages in the concurrent constraint family In addition he provides a concrete realization of the paradigm on a sequential machine by presenting a compiler for the concurrent constraint language Herbrand and demonstrates a number of constraint based concurrent programming techniques that lead to novel presentations of algorithms for many concurrent programming problems   **Concurrent constraint programming** Vijay Saraswat,Martin Rinard,1989   **Concurrent Constraint**

Programming P. Codognet,1998 *Concurrent constraint programming languages* Vijay Anand Saraswat,1989 **Concurrent Constraint Programming Languages** Vijay A. Saraswat,1989 *Multiparadigm Constraint Programming Languages* Petra Hofstedt,2011-06-16 Programming languages are often classified according to their paradigms e g imperative functional logic constraint based object oriented or aspect oriented A paradigm characterizes the style concepts and methods of the language for describing situations and processes and for solving problems and each paradigm serves best for programming in particular application areas Real world problems however are often best implemented by a combination of concepts from different paradigms because they comprise aspects from several realms and this combination is more comfortably realized using multiparadigm programming languages This book deals with the theory and practice of multiparadigm constraint programming languages The author first elaborates on programming paradigms and languages constraints and the merging of programming concepts which yields multiparadigm constraint programming languages In the second part the author inspects two concrete approaches on multiparadigm constraint programming the concurrent constraint functional language CCFL which combines the functional and the constraint based paradigms and allows the description of concurrent processes and a general framework for multiparadigm constraint programming and its implementation Meta S The book is appropriate for researchers and graduate students in the areas of programming and artificial intelligence **On the Expressive Power of Concurrent Constraint Programming Languages** ,2002 **Constraints Meet Concurrency** Jacopo Mauro,2014-02-11 This book describes the benefits that emerge when the fields of constraint programming and concurrency meet On the one hand constraints can be used in concurrency theory to increase the conciseness and the expressive power of concurrent languages from a pragmatic point of view On the other hand problems modeled by using constraints can be solved faster and more efficiently using a concurrent system Both directions are explored providing two separate lines of development Firstly the expressive power of a concurrent language is studied namely Constraint Handling Rules that supports constraints as a primitive construct The features of this language which make it Turing powerful are shown Then a framework is proposed to solve constraint problems that is intended to be deployed on a concurrent system For the development of this framework the concurrent language Jolie following the Service Oriented paradigm is used Based on this experience an extension to Service Oriented Languages is also proposed in order to overcome some of their limitations and to improve the development of concurrent applications **Constraint Programming** Brian Mayoh,Enn Tyugu,Jaan Penjam,2013-11-21 Constraint programming is like an octopus spreading its tentacles into databases operations research artificial intelligence and many other areas The concept of constraint programming was introduced in artificial intelligence and graphics in the 1960s and 1970s Now the related techniques are used and studied in many fields of computing Different aspects of constraint processing are investigated in theoretical computer science logic programming knowledge representation operations research and related application domains

Constraint programming has been included in the lists of related topics of many conferences Nevertheless only in 1993 were the first forums held devoted as a whole to this field of knowledge These were the First Workshop on Principles and Practice of Constraint Programming PPCP 93 which was held in Newport Rhode Island USA April 28 30 the International Workshop on Constraint Processing at CSAM 93 held in St Petersburg Russia July 20 21 and the NATO Advanced Study Institute NATO AS on Constraint Programming held in Parnu Estonia August 13 24 NATO A Sis are aimed to be schools bringing together leading researchers and practitioners from industry and academia in some area of knowledge to provide a concise picture of the work done and results obtained by different groups This is intended for dissemination of advanced knowledge not yet taught regularly in of new topics university However ASis must also encourage the introduction into university curricula as well as foster international scientific contacts   Non-monotonic Concurrent Constraint Programming Frank Sipke Boer,1994   **A foundation for higher-order concurrent constraint programming** Gert Smolka,1994   A Fully Abstract Model for Concurrent Constraint Programming Frank S. De Boer,Catuscia Palamidessi,1991 Moreover we consider the problem of full abstraction Since our notion of observables implies the removal of silent steps the presence of the choice operator induces the same problems for compositionality as bisimulation in CCS We show that in our framework this problem has a simple solution which consists of introducing a semantical distinction between the various ways in which deadlock and failure might occur The resulting semantics is fully abstract and still based on linear sequences   Special Issue on Concurrent Constraint Programming Philippe Codognet,1998   **Concurrent Constraint Programming and Non-commutative Linear Logic** P. Ruet,F. Fages,1996   Efficient Verification and New Reasoning Techniques for Concurrent Constraint Programming Luis Fernando Pino Duque,2014   **Lectures on Concurrency and Petri Nets** Jörg Desel,Wolfgang Reisig,Grzegorz Rozenberg,2004-07-09 This tutorial volume originates from the 4th Advanced Course on Petri Nets ACPN 2003 held in Eichsttt Germany in September 2003 In addition to lectures given at ACPN 2003 additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area This book will be useful as both a reference for those working in the area as well as a study book for the reader who is interested in an up to date overview of research and development in concurrent and distributed systems of course readers specifically interested in theoretical or applicational aspects of Petri nets will appreciate the book as well   Object-oriented concurrent constraint programming in Oz Gert Smolka,Martin Henz,Jörg Würtz,1993   **Programming Constraint Services** Christian Schulte,2002 This book is concerned with the architecture and implementation of constraint engines The author s main contribution is that constraint services such as search and combinators are made programmable this is achieved by devising computation spaces as simple abstractions for programming constraint services at a high level State of the art and novel search strategies such as visual interactive search and parallel search are covered This book is indispensable reading for anyone seriously interested in constraint technology

The Enigmatic Realm of **Concurrent Constraint Programming**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. Its capacity to stir emotions, ignite contemplation, and catalyze profound transformations is nothing in short supply of extraordinary. Within the captivating pages of **Concurrent Constraint Programming** a literary masterpiece penned by way of a renowned author, readers attempt a transformative journey, unlocking the secrets and untapped potential embedded within each word. In this evaluation, we shall explore the book is core themes, assess its distinct writing style, and delve into its lasting effect on the hearts and minds of those that partake in its reading experience.
