Conditionals A Comprehensive Empirical Analysis:

Conditional Structures in Mesopotamian Old Babylonian Eran Cohen, 2012-10-15 This volume examines conditional structures in Old Babylonian from a linguistic point of view drawing on a corpus of letters law collections and omens All of the conditional patterns are provided with a syntactic characterization so that each conditional sequence is differentiated from all other potential sequences The volume includes detailed discussion about the values of various verbal and other predicative forms in the conditional structures occurring in the corpus the differences between superficially similar conditional patterns and the functions of the various conditional patterns Many traditionally difficult points are treated and given suitable solutions The concluding sections of each chapter include linguistic glosses and more general discussions that provide linguistic typologists a window onto the conditional system of Old Babylonian

Context, Cognition and Conditionals Chi-Hé Elder, 2019-06-24 This book proposes a semantic theory of conditionals that can account for i the variability in usages that conditional sentences can be put and ii both conditional sentences of the form if p q and those conditional thoughts that are expressed without using if It presents theoretical arguments as well as empirical evidence from English and other languages in support of the thesis that an adequate study of conditionals has to go beyond an analysis of specific sentence forms or lexical items The resulting perspective on conditionals is one in which conditionality is located at a higher level than that of the sentence namely at the level of thought The author argues that it is only through adopting such a perspective and with it a commitment to context dependent semantics that we can successfully represent conditional utterances as they are used and understood by ordinary language users It will be of interest to students and scholars working on the semantics of conditionals in the fields of linguistics especially semantics and pragmatics and philosophy of language
