On Conceptual Modelling M.L. Brodie, J. Mylopoulos, J.W. Schmidt, 1984 The growing demand for systems of ever increasing complexity and precision has stimulated the need for higher level concepts tools and techniques in every area of Computer Science Some of these areas in particular Artificial Intelligence Databases and Programming Languages are attempting to meet this demand by defining a new more abstract level of system description We call this new level conceptual in recognition of its basic conceptual nature In Artificial

Intelligence the problem of designing an expert system is seen primarily as a problem of building a knowledge base that represents knowledge about an enterprise Consequently Knowledge Representation is viewed as a central issue in Artificial Intelligence research Database design methodologies developed during the last five years are almost unanimous in offering semantic data models in terms of which the designer directly and naturally models an enterprise before proceeding to a detailed logical and physical database design In Programming Languages different forms of abstraction which allow implementation independent specifications of data functions and control have been a major research theme for a decade To emphasize the common goals of these three research efforts we call this new activity conceptual modelling Proceedings of the Symposium on Partial Evaluation and Semantics-Based Program Manipulation ,1993 **IEEE Standard Dictionary of Electrical and Electronics Terms** Frank Jay,Institute of Electrical and Electronics Engineers,American National Standards Institute,1984 General literature Reference **Proceedings of the Annual Meeting** American Society for Information Science,1964
