Conceptual Structures: Logical, Linguistic, and Computational Issues Bernhard Ganter, Guy W. Mineau, 2006-12-30. Computer scientists create models of a perceived reality. Through AI techniques, these models aim at providing the basic support for emulating cognitive behavior such as reasoning and learning, which is one of the main goals of the AI research effort. Such computer models are formed through the interaction of various acquisition and inference mechanisms: perception, concept learning, conceptual clustering, hypothesis testing, probabilistic inference, etc., and are represented using different paradigms tightly linked to the processes that use them. Among

these paradigms let us cite biological models neural nets genetic programming logic based models rst order logic modal logic rule based s tems virtual reality models object systems agent systems probabilistic m els Bayesiannets fuzzylogic linguisticmodels conceptualdependencygraphs language based representations etc OneofthestrengthsoftheConceptualGraph CG theoryisitsversatilityin terms of the representation paradigms under which it falls It can be viewed and therefore used under di erent representation paradigms which makes it a p ular choice for a wealth of applications Its full coupling with di erent cognitive processes lead to the opening of the eld toward related research communities such as the Description Logic Formal Concept Analysis and Computational Linguistic communities We now see more and more research results from one community enrich the other laying the foundations of common philosophical grounds from which a successful synergy can emerge
