Cellular And Cytokine Networks In Tissue Immunity:

Cellular and Cytokine Networks in Tissue Immunity International Union of Reticuloendothelial Societies. International Congress, 1991 This compilation examines the defensive role of cellular and cytokine networks responding to injury infection or inflammation of different tissue such as the brain epithelium intestinal tract and respiratory tract It covers the complex actions of diverse cytokines including human interleukin 9 interleukin 11

Microbial Infections Herman Friedman, Thomas W. Klein, Hideyo Yamaguchi, 2012-12-06 This volume is based on the Proceedings of the International Conference on Microbial Infections Role of Biological Response Modifiers held in Tampa FL May 29 31 1991 The major purpose of this conference was to bring together in one forum prominent investigators from around the world studying a variety of microbial pathogens including bacteria viruses and fungi and the effects of biological response modifiers BRM on the immune response to these microorganisms BRM have been widely utilized in the area of antitumor resistance and include not only experimental tumor cell vaccines but also biologically active substances such as cytokines i e interferons tumor necrosis factor and interleukins as well as products from bacteria which influence host resistance mechanisms It is the belief of the organizers of this Conference that it was very timely to discuss in detail BRMs as they impact on microbial infections per se It is now widely accepted that immunocompromised individuals including those exposed to immunosuppressive substances such as antimetabolites used for chemotherapy of malignancies or infectious agents such as the human immunodeficiency virus and other viruses which depress the immune response and in turn affect a host so as to become highly susceptible to opportunistic microorganisms benefit from BRM stimulation of their immune system A wide variety of immunomodulators are now being studied in terms of treating infectious diseases as well as malignancy and autoimmune diseases
