Cell To Cell Communication:

Emerging Concepts of Tumor Exosome-Mediated Cell-Cell Communication Huang-Ge Zhang,2012-09-06 In multicellular organisms communication between cells involves secretion of proteins that bind to receptors on neighboring cells While this has been well documented another mode of intercellular communication has recently become the subject of increasing interest the release of exosomes In cancer tumor exosomes are involved in various aspects of pathogenesis including proliferation immunosuppression and metastasis Given the ability of exosomes to export unneeded endogenous molecules from cells these structures hold great potential as anticancer therapeutic agents They are also being studied as prognostic markers for cancer Cell-to-Cell Communication Walmor C. Intercommunication Walmore C. De Mello,1989-12-21 This important publication addresses intercellular communication in health and disease It includes recent advances in morphology and chemical organization of gap junctions It discusses the possible role of intercellular channels in excitable and non excitable tissues The book presents modulation of junctional permeability as well as the possible role of cell communication in embryonic development and growth The text concludes with a synthetic view of the role of gap junctions and potential implications to cardiology oncology and other areas of pathology This volume is important to professionals in pharmacology physiology biochemistry biomedical science pathobiology pathology molecular genetics toxicology and human development **Cell Communication** Michael

Friedman,Brett Friedman,2004-12-15 Discusses how different cells communicate with each other and what can happen when things go wrong *Cell to Cell Signals in Plants and Animals* Volker Neuhoff,John Friend,2013-06-29 Summarizing research progress achieved in 32 areas of cell biology covered in this series this volume places special emphasis on the following topics recognition in parasitic and symbiotic systems the molecular biology and genetics of susceptibility and resistance of plants and animals to pathogens parasites and symbionts the cell to cell recognition and differentiation the most challenging problems in developmental biology of plants and animals the plasticity in cell to cell communication which plays a major role in cell differentiation and function **Cell Communication in Nervous and Immune System** Eckart D.

Gundelfinger,Constanze Seidenbecher,Burkhart Schraven,2006-09-08 At first glance the nervous and immune systems appear very different However both systems have developed mechanisms for memory formation though of quite different quality and significance for the organism One striking example is that both systems form and communicate via synapses armed with similar sets of proteins This collection of reviews contributed by internationally recognized immunologists and molecular and cellular neurobiologists puts side by side cellular communication devices and signaling mechanisms in the immune and nervous systems and discusses mechanisms of interaction between the two systems the significance of which has only recently been fully appreciated **Gap Junctions: Molecular Basis of Cell Communication in Health and**

Disease Dale J. Benos,Camillo Peracchia,1999-12-14 Since the first gap junction protein connexin was cloned over a decade

ago more than a dozen connexin genes have been cloned. Consequently a wealth of information on the molecular basis of gap junctional communication has been accumulated. This book pays tribute to this exciting era in the history of cell communication research by documenting the great strides made in this field as a result of the merging of biophysics and molecular biology, two of the most powerful approaches to studying the molecular basis of membrane channel behavior. Twenty-eight comprehensive chapters authored by internationally recognized leaders in the field discuss the biophysical, physiological, and molecular characteristics of cell-to-cell communication via gap junctions. Key aspects of molecular structure, formation, gating, conductance, and permeability of vertebrate and invertebrate gap junction channels are highlighted. In addition, a number of chapters focus on recent discoveries that implicate connexin mutations and alterations of gap junctional communication in the pathogenesis of several diseases, including the X-linked Charcot-Marie-Tooth demyelinating disease, some forms of inherited sensorineural deafness, malignant transformation, cardiac malformations, and arrhythmia, eye lens cataract, and Chagas disease.

The Core Concepts of Physiology Joel

Michael, William Cliff, Jenny McFarland, Harold Modell, Ann Wright, 2017-02-20

This book offers physiology teachers a new approach to teaching their subject that will lead to increased student understanding and retention of the most important ideas. By integrating the core concepts of physiology into individual courses and across the entire curriculum, it provides students with tools that will help them learn more easily and fully understand the physiology content they are asked to learn. The authors present examples of how the core concepts can be used to teach individual topics, design learning resources, assess student understanding, and structure a physiology curriculum.

Cell-Cell Channels František Baluška, Dieter

Volkman, Peter W. Barlow, 2007-08-10

The biological sciences are dominated by the idea that cells are the functionally autonomous, physically separated, discrete units of life. This concept was propounded in the 19th century by discoveries of the cellular structuring of both plants and animals. Moreover, the apparent autonomy of unicellular eukaryotes, as well as the cellular basis of the mammalian brain, an organ whose anatomy for a long while defied attempts to validate the idea of the cellular nature of its neurons, seemed to provide the final conclusive evidence for the completeness of cell theory, a theory which has persisted in an almost dogmatic form up to the present day. However, it is very obvious that there are numerous observations which indicate that it is not the cells which serve as the basic units of biological life, but that this property falls to some other subcellular assemblage. To deal with this intricate problem concerning the fundamental unit of living matter, we proposed the so-called Cell Body concept, which in fact develops an exceedingly original idea proposed by Julius Sachs at the end of the 19th century. In the case of eukaryotic cells, DNA-enriched nuclei are intimately associated with a microtubular cytoskeleton. In this configuration, as a Cell Body, these two items comprise the fundamental functional and structural unit of eukaryotic living matter. The Cell Body seems to be inherent to all cells in all organisms.

Intercellular Communication

Walmor DeMello, 2013-11-11 Progress made in the last 20 years clearly indicates that the cell surface is an extremely dynamic structure involved in fundamental processes such as cell motility innervation and cell adhesion Of particular interest is the finding that in several tissues the cell surface is differentiated at the intercellular region thereby providing communicating channels between apposing cells Although our actual knowledge of the precise structures and mechanisms in the complex process of intercellular communication is still scanty evidence has been presented that ions and molecules diffuse from cell to cell establishing a physiological continuum Embryonic differentiation cell growth neoplasia electrical synchronization in nerve and muscles as well as immune response seem to be related to cell communication In organizing this volume it has been our intention to provide the reader with an actual review of the processes involved in intercellular communication in normal tissues as well as in neoplasia We sincerely believe that the opinions and experiences described herein will be of help in establishing new perspectives for the future of this exciting new field of cell biology We wish to thank all the colleagues who joined us in the organization of this volume as well as Plenum Publishing Corporation for making its appearance possible
