Cellular Interactions:

Cellular Interactions H. F. Linskens, J. Heslop-Harrison, 2012-12-06 H F LINSKENS and J HESLOP HARRISON The chapters of this volume deal with intercellular interaction phenomena in plants Collectively they provide a broad conspectus of a highly active if greatly fragmented research field Certain limitations have been imposed on the subject matter the most important being the exclusion of long range interactions within the plant body It is true that pervasive hormonal control systems cannot readily be demarcated from controls mediated by pheromones or information carrying molecules with more limited spheres of action but consideration is given in this volume to the main classes of plant hormones and their functions only incidentally since these are treated adequately in other volumes of this Encyclopedia series Volume 9 11 and in numerous other texts and reviews Similarly certain other effects such as those associated with nutrients and ions are not considered in any detail Furthermore we have excluded intracellular interactions and also consideration of transport phenomena which are treated in detail in Volume 3 of this Series Other aspects of intercellular interaction such as cell surface phenomena and implications of lectin carbohydrate interactions and plant virus interrelationships are treated in other sections of this Encyclopedia Volumes 13B and 14B respectively In the volume on physiological plant pathology Volume 4 of this series special attention has been given to host pathogen interaction These aspects of our subject will therefore be excluded in the present treatise

Marthy,2013-06-29 The NATO Advanced Study Institute on Cellular and Molecular Control of Direct Cell Interactions in Developing System has been attended by 15 invited main lecturers and 60 participants According to its purpose senior scientists postdoctoral trainees and graduate students working in areas like biology biochemistry electrophysiology medicine etc could discuss their common interest in the various structural ultrastructural molecular and functional aspects of cell interactions in developing in vivo and in vitro systems Whereas the topics of the first week have been mostly concerned with the general aspects of cell interactions in embryogenesis section I and II of this book the second week has been mainly devoted to the structures and functions of the direct cell contact sites at the membrane level as gap junctions including electrophysiological aspects dye coupling and selective cell cooperation in some model systems as the neuro muscular junctions section III V of this book A multidisciplinary and stepwise approach from initial cell contacts in early embryogenesis up to well defined selective cell cooperation appeared to be an efficient means to provide answers to the question of how cells control in a dynamic system as given in a differentiating embryo their multiple temporary and permanent interactions so necessary for ordered cell positioning cell linking and well established cell to cell communication **Cell-cell Interactions**
