Disorders Of Lipid Metabolism:

Disorders of Lipid Metabolism G.V. Marinetti, 2012-12-06 For the past 30 years I have been teaching lipid biochemistry to medical students, graduate students, and undergraduate students. The major topics covered in my courses were fatty acids, prostaglandins, leukotrienes, phospholipids, glycolipids, triacylglycerols, cholesterol, bile acids, and plasma lipoproteins. Emphasis was placed on the regulation and disorders of lipid metabolism. The latter included hyperlipidemias, atherosclerosis, and alcohol-induced liver damage. In this volume, I have chosen to focus on the disorders of lipid metabolism at a level appropriate both for medical students and for graduate and undergraduate students majoring in the biological sciences. The biochemistry, nutrition, genetics, and cell biology aspects of lipids and lipid metabolism will be covered as they relate to lipid disorders. I am not aware of any textbook that integrates the disorders of lipid metabolism in this manner. Chapter 1 includes a brief discussion of the basic structures, properties, and metabolism of lipids. This chapter is not very detailed since the material covered is available in basic textbooks on biochemistry. The major focus of this volume is the various lipid disorders, with emphasis on polyunsaturated fatty acids, the molecular biology and pathogenesis of the hyperlipidemias, dietary and drug therapy for the hyperlipidemias, and alcohol-induced liver damage. The material presented has been obtained from several textbooks on biochemistry and from a variety of recent articles in the scientific literature.

Reckless, Jonathan Morrell, 2005 Most of us have heard of cholesterol, but few realize how common it is to find abnormal blood levels. In truth, living in modern society, the majority of us have abnormal cholesterol levels and are potentially at risk from atherosclerotic disease. Sometimes raised levels are obvious, but in other situations, the pattern of other blood lipids defines the risk, and sometimes even apparently innocent levels benefit from modification. In just a few decades, health professionals have witnessed the emergence of the study of blood lipids from theoretical science to the forefront of everyday clinical practice. A number of clinical trials have demonstrated that lipid lowering saves lives and prevents heart attacks and strokes, and health professionals are charged with implementing their findings. For a number of reasons, the implementation of the evidence base has been slow, but a series of initiatives, including new guidelines and directives involving new structures and pathways of healthcare, have been set in place to redress this. Inevitably, within an emerging and evolving discipline, a number of questions arise from interested health professionals and the public. At both personal and professional levels, this book aims by answering a series of questions.

to equip the reader with a comprehensive working knowledge of the subject It is hoped therefore that the book will be useful to the range of health professionals who treat lipid disorders as well as the growing number of people who seek accurate authoritative and unbiased information on which to base their personal health choices Useful dip in question and answer format Includes patient questions written in a different style Covers both common and rare disorders Includes useful information on websites and patient associations

The recent symposium and the appearance of this new book on Drugs Affecting Lipid Metabolism take place at a very unusual time for the development of this area After the publication and wide acceptance of the results of the cholestyramine study by the Lipid Clinics in the USA showing for the first time a direct association between drug induced reduction of plasma levels of total and LDL cholesterol and coronary heart disease in a high risk population an unparalleled interest in drugs and other procedures able to control plasma cholesterol levels has been activated Two other significant events occurred during 1986 and 1987 the availability of compact instruments for the immediate determination of total cholesterol in plasma or total blood and the developments of new agents such as the inhibitors of HMG CoA hydroxymethyl glutaryl CoA reductase and ACAT inhibitors with potentially great effect on plasma lipid levels after oral administration These new advances together with the combined efforts of cell biologists and lipoprotein chemists have set the pace for an exciting period of research and clinical applications of diets and drugs affecting lipids This volume which includes the work of many of the leading world laboratories represents an authoritative and up to date appraisal of the status of the art and a stimulus to future research at laboratory and clinical level in an area of opportunity for clinical and preventive medicine

lipidoses was presented as lectures or posters and avidly discussed Other topics presented in special sessions were drug induced lipidoses and peroxisomal disorders The meeting ended with a session devoted to medical aspects of disorders of lipid metabolism The symposium which included about 50 lectures and close to 70 posters had an intense scientific character superimposed on a most pleasant and collegial atmosphere Ample time was provided to personal discussions lodging of the participants in the students residence located near the meeting place permitted further contacts between them
