Distortion By Compensation:

Distortion by Compensation Ralph E. Cowles,1923 **Radar Signals** Charles Cook,2012-12-02 Radar Signals An Introduction to Theory and Application introduces the reader to the basic theory and application of radar signals that are designated as large time bandwidth or pulse compression waveforms Topics covered include matched filtering and pulse compression optimum predetection processing the radar ambiguity function and the linear frequency modulation waveform and matched filter Parameter estimation and discrete coded waveforms are also discussed along with the effects of distortion on matched filter signals This book is comprised of 14 chapters and begins with an overview of the concepts and techniques of pulse compression matched filtering with emphasis on coding source and decoding device The discussion then turns to the derivation of the matched filter properties in order to maximize the signal to noise ratio analysis of radar ambiguity function using the principle of stationary phase parameter estimation and the method of maximum likelihood and measurement accuracies of matched filter radar signals Waveform design criteria for multiple and dense target environments are also considered The final chapter describes a number of techniques for designing microwave dispersive delays This monograph will be a useful resource for graduate students and practicing engineers in the field of radar system engineering *Control of Hardware-In-The-Loop Space Contact Simulation Robot* Chenkun Qi,Feng Gao,Yan Hu,2025-10-11 The book focuses on control methods of hardware in the loop simulation robots on the ground to simulate the contact dynamics of spacecraft and space manipulators in space Both principles and engineering practice have been addressed This is achieved by providing an in depth study of several major topics such as control system structure and modeling simulation distortion analysis distortion compensation control methods simulation and experimental verification and applications The comprehensive and systematic treatment of practical issues in the control of hardware in the loop space contact simulation robots is one of the main features of the book which is particularly suitable for readers who are interested in learning practical solutions in the control of hardware in the loop space contact simulation robots The book can benefit researchers engineers and graduate students in the fields of aerospace engineering mechanical engineering and control engineering etc *Satellite Navigation Systems and Technologies* Jun Xie,Haihong Wang,Peng Li,Yansong Meng,2020-07-31 Based on the design theory and development experience of Beidou navigation satellite system BDS this book highlights the space segment and the related satellite technologies as well as satellite ground integration design from the perspective of engineering The satellite navigation technology in this book is divided into uplink and reception technology broadcasting link technology inter satellite link technology time frequency system technology navigation signal generation and assessment technology navigation information management technology autonomous operation technology of navigation satellite In closing the book introduces readers to the technological development status and trend of BDS and other GNSS and propose the technologies of future development Unlike most current books on this topic which largely concentrate on principles receiver design or applications

the book also features substantial information on the role of satellite system in the GNSS and the process of signal information flow and each chapter not only studies on the theoretical function and main technologies but also focuses on engineering development Accordingly readers will gain not only a better understanding of navigation satellite systems as a whole but also of their main components and key technologies

Intelligent Watermarking Techniques Hsiang-Cheh Huang, Jeng-Shyang Pan, L. C. Jain, 2004 Watermarking techniques involve the concealment of information within a text or images and the transmission of this information to the receiver with minimum distortion This is a very new area of research The techniques will have a significant effect on defence business copyright protection and other fields where information needs to be protected at all costs from attackers This book presents the recent advances in the theory and implementation of watermarking techniques It brings together for the first time the successful applications of intelligent paradigms including comparisons with conventional methods in many areas The accompanying CD Rom provides readers with source codes and executable to put into practice general topics in watermarking
