Modeling Methods for Process Induced Distortions of CFRP-Parts produced in the Prepreg-Autoclave-Process Tim Frerich,2023-06-20 Process induced distortions are a challenge in the production of high performance components made of carbon fiber reinforced plastics In order to prevent the distortions a prediction is of great utility For components manufactured in the prepreg autoclave process which is often used in the aerospace industry prediction methods are investigated within this work First the state of the art is discussed and based on this two promising approaches are identified which are further investigated and implemented A rapid simulation approach and a complex one which requires more effort but allows further investigations of the distortions For the latter approach new material models and rules of mixture are developed that take into account modern material architectures with interleaf layers Using these material models the observed material behavior can be represented more accurately than with material models from the literature The results obtained by both approaches are compared with experimental results A good agreement can be shown between the measurements and the simulation

A Primer of GIS, First Edition Francis James Harvey,2008 This textbook examines the choices considered when creating geographic representations and cartographic representations transforming spherical coordinates to planar coordinates and modeling geographic data Harvey geography University of Minnesota introduces the three generic options for recording the locations and characteristics of things and events the principles of remote sensing map design elements and geostatistical methods Fifteen color plates are provided in the middle of the book while black and white images are scattered throughout

Analysis of Oriented Texture with application to the Detection of Architectural Distortion in Mammograms Fábio J Ayres,Rangaraj M Rangayyan,J. E. Leo Desautels,2022-06-01 The presence of oriented features in images often conveys important information about the scene or the objects contained the analysis of oriented patterns is an important task in the general framework of image understanding As in many other applications of computer vision the general framework for the understanding of oriented features in images can be divided into low and high level analysis In the context of the study of oriented features low level analysis includes the detection of oriented features in images a measure of the local magnitude and orientation of oriented features over the entire region of analysis in the image is called the orientation field High level analysis relates to the discovery of patterns in the orientation field usually by associating the structure perceived in the orientation field with a geometrical model This book presents an analysis of several important methods for the detection of oriented features in images and a discussion of the phase portrait method for high level analysis of orientation fields In order to illustrate the concepts developed throughout the book an application is presented of the phase portrait method to computer aided detection of architectural distortion in mammograms

Control of Welding Distortion in Thin-Plate Fabrication Tom Gray, D. Camilleri, N. McPherson, 2014-02-15
The intense temperature fields caused by heat sources in welding frequently lead to distortions and residual stresses in the finished product. Welding distortion is a particular problem in fabricating thin plate structures such as ships. Based on pioneering research by the authors, *Control of Welding Distortion in Thin Plate Fabrication* reviews distortion test results from trials and shows how outcomes can be modeled computationally. The book provides readers with an understanding of distortion influences and the means to develop distortion reducing strategies. The book is structured as an integrated treatment. It opens by reviewing the development of computational welding mechanics approaches to distortion. Following chapters describe the industrial context of stiffened plate fabrication and further chapters provide overviews of distortion mechanics and the modeling approach. A chapter on full scale welding trials is followed by three chapters that develop modeling strategies through thermal process and thermo mechanical simulations based on finite element analysis. Simplified models are a particular feature of these chapters. A final sequence of chapters explores the simulation of welding distortion in butt welding of thin plates and fillet welding of stiffened plate structures and shows how these models can be used to optimize design and fabrication methods to control distortion. *Control of Welding Distortion in Thin Plate Fabrication* is a comprehensive resource for metal fabricators, engineering companies, welders and welding companies and practicing engineers and academics with an interest in welding mechanics. Allows practitioners in the field to minimize distortion during the welding of thin plates. Provides computational tools that can give insight into the effects of welding and fabrication procedures. Demonstrates how welding distortion in thin plate fabrications can be minimized through design. *AB Bookman's Weekly*, 1997
Nonlinear Distortion in Wireless Systems Khaled M. Gharaibeh, 2011-12-07
This book covers the principles of modeling and simulation of nonlinear distortion in wireless communication systems with MATLAB simulations and techniques. In this book the author describes the principles of modeling and simulation of nonlinear distortion in single and multichannel wireless communication systems using both deterministic and stochastic signals. Models and simulation methods of nonlinear amplifiers explain in detail how to analyze and evaluate the performance of data communication links under nonlinear amplification. The book addresses the analysis of nonlinear systems with stochastic inputs and establishes the performance metrics of communication systems with regard to nonlinearity. In addition the author also discusses the problem of how to embed models of distortion in system level simulators such as MATLAB and MATLAB Simulink and provides practical techniques that professionals can use on their own projects. Finally the book explores simulation and programming issues and provides a comprehensive reference of simulation tools for nonlinearity in wireless communication systems.
