Distributed Artificial Intelligence Meets Machine Learning Learning in Multi-Agent Environments Gerhard Weiss,2014-01-15   Distributed Artificial Intelligence Meets, Machine Learning Gerhard Weiss,European Conference on Artificial Intelligence,International Conference on Multiagent Systems,1997   **Distributed Artificial Intelligence Meets Machine Learning Learning in Multi-Agent Environments** Gerhard Weiß,1997-04-29 This state of the art report documents current and ongoing developments in the area of learning in DAI systems It is indispensable reading for anybody active in the area and will serve as a valuable source of information and inspiration for AI and ML professionals wishing to learn about this new interdisciplinary field or to prepare themselves for doing relevant research   Multi-Agent Systems and Agent-Based Simulation Jaime S. Sichman,Rosaria Conte,Nigel Gilbert,2005-07-12 Fifteen papers were presented at the first workshop on Multi Agent Systems and Agent Based Simulation held as part of the Agents World conference in Paris July 4 6 1998 The workshop was designed to bring together two developing communities the multi agent systems researchers who were the core participants at Agents World and social scientists interested in using MAS as a research tool Most of the social sciences were represented with contributions touching on sociology management science economics psychology environmental science ecology and linguistics The workshop was organised in association with SimSoc an informal group of social scientists who have arranged an irregular series of influential workshops on using simulation in the social sciences beginning in 1992 While the papers were quite heterogeneous in substantive domain and in their disciplinary origins there were several themes which recurred during the workshop One of these was considered in more depth in a round table discussion led by Jim Doran at the end of the workshop on Representing cognition for social simulation which addressed the issue of whether and how cognition should be modelled Quite divergent views were expressed with some participants denying that individual cognition needed to be modelled at all and others arguing that cognition must be at the centre of social simulation   **The Handbook on Reasoning-Based Intelligent Systems** Kazumi Nakamatsu,2013 This book consists of various contributions in conjunction with the keywords OC reasoningOCO and OC intelligent systemsOCO which widely covers theoretical to practical aspects of intelligent systems Therefore it is suitable for researchers or graduate students who want to study intelligent systems generally   *Genetic Programming* Wolfgang Banzhaf,1998-03-25 This book presents the latest in mammary gland transgenesis the exploitation of transgenic technology for the production of therapeutic proteins by routine or conventional methods Following a section with an overview of all relevant methodologies readers will find relevant information on the regulation of milk gene expression and bioreactor species such as cattle rabbits and pigs   Layered Learning in Multiagent Systems Peter Stone,2000-03-03 This book looks at multiagent systems that consist of teams of autonomous agents acting in real time noisy collaborative and adversarial environments This book looks at multiagent systems that consist of teams of autonomous agents acting in real time noisy collaborative and adversarial

environments The book makes four main contributions to the fields of machine learning and multiagent systems First it describes an architecture within which a flexible team structure allows member agents to decompose a task into flexible roles and to switch roles while acting Second it presents layered learning a general purpose machine learning method for complex domains in which learning a mapping directly from agents sensors to their actuators is intractable with existing machine learning methods Third the book introduces a new multiagent reinforcement learning algorithm team partitioned opaque transition reinforcement learning TPOT RL designed for domains in which agents cannot necessarily observe the state changes caused by other agents actions The final contribution is a fully functioning multiagent system that incorporates learning in a real time noisy domain with teammates and adversaries a computer simulated robotic soccer team Peter Stone s work is the basis for the CMUnited Robotic Soccer Team which has dominated recent RoboCup competitions RoboCup not only helps roboticists to prove their theories in a realistic situation but has drawn considerable public and professional attention to the field of intelligent robotics The CMUnited team won the 1999 Stockholm simulator competition outscoring its opponents by the rather impressive cumulative score of 110 0   **Intelligent Agents VII. Agent Theories Architectures and Languages** Cristiano Castelfranchi,Yves Lesperance,2003-07-31 Intelligent agents are one of the most important developments in computer science of the past decade Agents are of interest in many important application areas ranging from human computer interaction to industrial process control The ATAL workshop series aims to bring together researchers interested in the core micro aspects of agent technology Speci cally ATAL addresses issues such as theories of agency software architectures for intelligent agents methodologies and programming languages for r lizing agents and software tools for applying and evaluating agent systems One of the strengthsoftheATALworkshopseriesisitsemphasisonthesynergiesbetweentheories languages architectures infrastructures methodologies and formal methods This year s workshop continued the ATAL trend of attracting a large number of high quality submissions In more detail 71 papers were submitted to the ATAL 2000 workshop from 21 countries After stringent reviewing 22 papers were accepted for publication and appear in these proceedings As with previous workshops in the series we chose to emphasize what we perceive asimportantnewthemesinagentresearch Thisyear sthemeswerebothassociatedwith the fact that the technology of intelligent agents and multi agent systems is beginning to migrate from research labs to software engineering centers As agents are deployed in applications such as electronic commerce and start to take over responsibilities for their human users techniques for controlling their autonomy become crucial As well the availability of tools that facilitate the design and implementation of agent systems becomes an important factor in how rapidly the technology will achieve widespread use   Multi-agent Systems and Agent-based Simulation ,1998   **Index of Conference Proceedings** British Library.
