Abstract

This body of research indicates that although many consider the mainframe to perhaps be a relic of computing history – it was there at the “ground zero” of technology economics – the cost structure of mainframe computing is highly relevant. In fact with the differential and high intensity of computing in small to medium enterprises, an understanding of the mainframe’s computational and economic relevance in the context of its contribution to business performance is critical. The masters of technology economics may in fact become those companies that prosper in our evolving and complex global economy.

Background: About Rubin Worldwide

Rubin Worldwide (www.rubinworldwide.com) is a boutique research and consultancy firm with a unique focus on “technology economics”. Since 1982, the founder and CEO Dr. Howard Rubin has been collecting data on the interplay and impact of technology on the global competitiveness of nations, the dynamics of technology investment and its management within companies (and government), and technology costs themselves. In collaboration with Jed Rubin in the mid-1990’s, Dr. Rubin started to produce reports on global trends and patterns which now are considered the foundation of the field of technology economics. Rubins Worldwide data and analytics are used by many of the world’s governments, premiere companies, analyst firms, and consultancies to explore the evolving world of technology economics and its impact as a competitive weapon.

Background: Technology Economics and Business Performance

It is clear that businesses (and government) are becoming more IT “intense” every year. Technology expense is a rising part of business operations expense and is rising relative to revenue. Businesses that have been able to leverage their technology investments have prospered as evidenced by their abilities to grow revenue via technology enabled products, to protect revenue by using technology (and data) to keep them closer to markets and customers, to reduce and avoid cost through targeted automation, and to manage overall risk through use of computer-based scenario models. Recent research (the “Rubin 300”) indicates that companies that are technology leaders outperform traditional market indices such as the DJIA and S&P.
