Distributed Lags:

Distributed Lags Phoebus J. Dhrymes, 1981 This volume presents an analysis of the estimation of distributed lag models It covers the algebraic structure of lag operators and examines the estimation of problems connected with finite and infinite lag structures under a variety of assumptions pertaining to the error process This revised edition emphasizes the potential applications of distributed lags discussing the polynomial lag hypothesis and its relation to restricted least squares Also the test for autocorrelation of the error structure when the model specification contains a lagged endogenous variable is examined The material is suitable for second year graduate students in economics and for undergraduates in statistics mathematics operations research econometrics and electrical engineering providing they have a background in calculus linear algebra and mathematical statistics

Dynamic Econometrics David F. Hendry, 1995 The main problem in econometric modelling of time series is discovering sustainable and interpretable relationships between observed economic variables The primary aim of this book is to develop an operational econometric approach which allows constructive modelling Professor Hendry deals with methodological issues model discovery data mining and progressive research strategies with major tools for modelling recursive methods encompassing super exogeneity invariance tests and with practical problems collinearity heteroscedasticity and measurement errors He also includes an extensive study of US money demand The book is self contained with the technical background covered in appendices It is thus suitable for first year graduate students and includes solved examples and exercises to facilitate its use in teaching

About the Series **Advanced Texts in Econometrics** is a distinguished and rapidly expanding series in which leading econometricians assess recent developments in such areas as stochastic probability panel and time series data analysis modeling and cointegration In both hardback and affordable paperback each volume explains the nature and applicability of a topic in greater depth than possible in introductory textbooks or single journal articles Each definitive work is formatted to be as accessible and convenient for those who are not familiar with the detailed primary literature

Advanced Econometric Methods Thomas B. Fomby, R. Carter Hill, Stanley R. Johnson, 2012-12-06 This book had its conception in 1975 in a friendly tavern near the School of Business and Public Administration at the University of Missouri Columbia Two of the authors Fomby and Hill were graduate students of the third Johnson and were and are concerned about teaching econometrics effectively at the graduate level We decided then to write a book to serve as a comprehensive text for graduate econometrics Generally the material included in the book and its organization have been governed by the question How could the subject be best presented in a graduate class For content this has meant that we have tried to cover all the bases and yet have not attempted to be encyclopedic The intended purpose has also affected the level of mathematical rigor We have tended to prove only those results that are basic and or relatively straightforward Proofs that would demand inordinant amounts of class time have simply been referenced The book is intended for a two semester course and paced to admit more extensive treatment of

areas of specific interest to the instructor and students We have great confidence in the ability industry and persistence of graduate students in ferreting out and understanding the omitted proofs and results In the end this is how one gains maturity and a fuller appreciation for the subject in any case It is assumed that the readers of the book will have had an econometric methods course using texts like J Johnston s *Econometric Methods* 2nd ed

Composite Lag Distributions in the Financial Sector R. S. Hanna,1975 **The Estimation of Distributed Lags in Short Panels** Zvi Griliches,Ariel Pakes,1980 In this paper we investigate the problem of estimating distributed lags in short panels Estimates of the parameter of distributed lag relationships based on single time series of observations have been usually rather imprecise The promise of panel data in this context is in the N repetitions of the time that it contains which should allow one to estimate the identified lag parameters with greater precision On the other hand panels tend to track their observations only over a relatively short time interval Thus some assumptions will have to be made on the contributions of the unobserved presample x_s to the current values of y before any lag parameters can be identified from such data In this paper we suggest two such assumptions both of which are at least in part testable and outline appropriate estimation techniques The first places reasonable restrictions on the relationship between the presample and insample x_s while the second imposes conventional functional form constraints on the lag coefficients associated with the presample x_s
