Distribution of Gold and Other Metals in Silicified Rocks of the Goldfield Mining District, Nevada Roger Parkmand Ashley, William J. Keith, 1976 **Statistical Analysis of Gold Assay and Other Trace-element Data** Richard F. Link, George S. Koch (Jr.), J. H. Schuenemeyer, 1971 The principal procedures for the statistical analysis of gold assay and other trace element data depend on applying either the normal frequency distribution or the lognormal frequency distribution The consequences of applying both methods are examined through reference to example data from United States and South African gold mines It is concluded that for estimation of average grades except for certain data with a very high coefficient of variation ratio of standard deviation to mean use of the lognormal distribution is ordinarily undesirable because bias may be introduced and little efficiency can be gained However if biased average grades can be tolerated as in the examination of data from surveys in exploration geochemistry use of the lognormal distribution may be desirable Various statistical analyses are detailed and the tables presented to implement the analyses are more complete than those previously published *Publications of the U.S. Geological Survey, 1971-1981* ,1986 *Publications of the Geological Survey Geological Survey (U.S.), 1948* *Gold in Meteorites and in the Earth's Crust* Robert Sprague Jones, 1968 Geological Survey Professional Papers ,1949 Distribution of Gold, Copper, and Some Other Metals in the McCarthy B-4 and B-5 Quadrangles, Alaska Edward Malcolm MacKevett, James G.
