Diving Birds:

Life Histories of North American Diving Birds Arthur Cleveland Bent, 1919 Life Histories of North American Diving Birds Arthur Cleveland Bent, 1986 This historic book may have numerous typos and missing text Purchasers can download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1919 edition Excerpt and tame they did not seem to be greatly disturbed or alarmed by our rock moving operations we usually found the female and occasionally the male sitting quietly on its single egg serenely looking at us with its big white eyes The curious up turned red bill and the white under parts were easily recognized even in the dark recesses of its nesting caverns There was only a single egg in each case which was lying on the bare rock or soil or on a bed of loose pebbles no nesting material had been brought in The parakeet auklet breeds abundantly on the high rocky islands of northern Bering Sea and into Bering Strait On the precipitous cliffs of St Matthew Island 200 feet or more above the sea we saw a few pairs apparently breeding among the fulmars and puffin but their eggs were beyond our reach in the inaccessible crevices in the rocks They were so tame and unsuspecting that I took a snapshot at one as it sat on a lofty pinnacle of rock within a few feet of me watching the cloud of fulmars sailing below Eggs The single egg is practically ovate in shape with a slight tendency toward elliptical ovate in some specimens The shell is finely granulated almost rough and without any luster The color is usually dull white or bluish white but some eggs are decidedly bluish about the color of heron s eggs but darker than the palest of these The measurements of 33 eggs in various collections average 54.3 by 37.3 millimeters the eggs showing the four extremes measure 58 by 33.5 57.5 by 40.5 51.5 by 37 and 52.5 by 33 millimeters Plumages The downy young when first hatched is fuscous black on the crown fuscous Benzo brown or hair brown on the back sides throat and breast and pale drab gray on the belly **The Inner Bird** Gary W. Kaiser, 2010-10-01 Birds are among the most successful vertebrates on Earth An important part of our natural environment and deeply embedded in our culture birds are studied by more professional ornithologists and enjoyed by more amateur enthusiasts than ever before However both amateurs and professionals typically focus on birds behaviour and appearance and only superficially understand the characteristics that make birds so unique The Inner Bird introduces readers to the avian skeleton then moves beyond anatomy to discuss the relationships between birds and dinosaurs and other early ancestors Gary Kaiser examines the challenges scientists face in understanding avian evolution even recent advances in biomolecular genetics have failed to provide a clear evolutionary story Using examples from recently discovered fossils of birds and near birds Kaiser describes an avian history based on the gradual abandonment of dinosaur like characteristics and the related acquisition of avian characteristics such as sophisticated flight techniques and the production of large eggs Such developments have enabled modern birds to invade the oceans and to exploit habitats that excluded dinosaurs for millions of years While ornithology is a complex discipline that draws on many fields it is nevertheless burdened with obsolete assumptions and archaic terminology The Inner Bird offers modern interpretations for some of those ideas and links them to

more current research It should help anyone interested in birds to bridge the gap between long dead fossils and the challenges faced by living species
