Krzysztof R. Apt, Tony Hoare, 2022-07-14 Edsger Wybe Dijkstra 1930 2002 was one of the most influential researchers in the history of computer science making fundamental contributions to both the theory and practice of computing Early in his career he proposed the single source

shortest path algorithm now commonly referred to as Dijkstra's algorithm. He wrote with Jaap Zonneveld the first ALGOL 60 compiler and designed and implemented with his colleagues the influential THE operating system. Dijkstra invented the field of concurrent algorithms with concepts such as mutual exclusion, deadlock detection, and synchronization. A prolific writer and forceful proponent of the concept of structured programming, he convincingly argued against the use of the 'Go To' statement. In 1972, he was awarded the ACM Turing Award for fundamental contributions to programming as a high intellectual challenge for eloquent insistence and practical demonstration that programs should be composed correctly, not just debugged into correctness, for illuminating perception of problems at the foundations of program design. Subsequently, he invented the concept of self-stabilization relevant to fault-tolerant computing. He also devised an elegant language for nondeterministic programming, and its weakest precondition semantics featured in his influential 1976 book *A Discipline of Programming*, in which he advocated the development of programs in concert with their correctness proofs. In the later stages of his life, he devoted much attention to the development and presentation of mathematical proofs, providing further support to his long-held view that the programming process should be viewed as a mathematical activity. In this unique new book, 31 computer scientists, including five recipients of the Turing Award, present and discuss Dijkstra's numerous contributions to computing science and assess their impact. Several authors knew Dijkstra as a friend, teacher, lecturer, or colleague. Their biographical essays and tributes provide a fascinating multi-author picture of Dijkstra from the early days of his career up to the end of his life.

*Stabilization, Safety, and Security of Distributed Systems* Colette Johnen, Elad Michael Schiller, Stefan Schmid, 2021-11-08

This book constitutes the refereed proceedings of the 23rd International Symposium on Stabilization, Safety, and Security of Distributed Systems SSS 2021, held virtually in November 2021. The 16 full papers, 10 short and 14 invited papers presented were carefully reviewed and selected from 56 submissions. The papers deal with the design and development of distributed systems with a focus on systems that are able to provide guarantees on their structure, performance, and/or security in the face of an adverse operational environment.

Program Chairs' Message

On behalf of the Technical Program Committee of the 6th International Workshop on Distributed Computing (IWDC 2004), it was our great pleasure to welcome the attendees to Kolkata, India. Over the last few years, IWDC has emerged as an internationally renowned forum for interaction among researchers from academia and industries around the world. A clear indicator of this fact is the large number of high-quality submissions of technical papers received by the workshop this year. The workshop program consisted of 12 technical sessions with 54 contributed papers, two keynote addresses, four tutorials, a panel, a poster,

session and the Prof A K Choudhury Memorial Lecture The IWDC Program Committee comprising 38 distinguished members worked hard to organize the technical program Following a rigorous review process out of 157 submissions only 54 papers were accepted for presentation in the technical sessions 27 of the accepted papers were classified as regular papers and the remaining 27 as short papers Another 11 papers were accepted for presentation in the poster session each with a one page abstract appearing in the proceedings
