## **Distributed Decision Making:**

**Hierarchies in Distributed Decision Making** Christoph Schneeweiss,2014-01-15      **Distributed Decision-making Systems** Margaret Anne Rathwell,1985 Information systems in organizations traditionally filter information upwards to a few decision makers at the top of a hierarchy where it can be coordinated However in practice decisions have to be taken at low levels even though they may conflict with those being made at similar levels elsewhere in the organization This thesis is concerned with understanding the needs for organizational decision support modelling the resulting distributed information support system and implementing a prototype system An examination is made of how groups organize their planning and decision making activities in a number of application areas and their requirements in terms of communication structures and online information systems capabilities are identified From this analysis a Distributed Decision Making DDM system is developed which 1 allows decision support systems DSS to be developed in an evolutionary manner by separate groups working in parallel and 2 enables the linking of these applications in decision making tasks The DDM focus encompasses information retrieval and generation information sharing information use and conflict resolution features such as the explanation of decisions A message based model of a DDM system is presented which is based on operator sharing and late binding of modules and a prototype system implemented under UNIX is described An agent command language AL containing explicit parallelism for programming distributed support system functions was designed and implemented The DDM system software provides the means for concurrent operation of the system as different users execute agents in parallel The prototype system was used for a research project support case study for the implementation of a decision making conferencing system and for demonstrating a number of      *Distributed Decision Making Using a Distributed Model* Robert R. Tenney,1979      Distributed Decision Making Christoph Schneeweiss,2014-01-15      **Distributed Decision Making** Berndt Brehmer,Jacques Leplat,Jens Rasmussen,1991      **Distributed Decision Making** Figen Öztoprak,İşletme Fakültesi,2005      **Distributed Decision Making** National Research Council,Division of Behavioral and Social Sciences and Education,Board on Human-Systems Integration,Committee on Human Factors,1990-02-01 Decision making in today s organizations is often distributed widely and usually supported by such technologies as satellite communications electronic messaging teleconferencing and shared data bases Distributed Decision Making outlines the process and problems involved in dispersed decision making draws on current academic and case history information and highlights the need for better theories improved research methods and more interdisciplinary studies on the individual and organizational issues associated with distributed decision making An appendix provides additional background reading on this socially and economically important problem area      **Distributed Decision Making and Control** Rolf Johansson,Anders Rantzer,2012-02-05 Distributed Decision Making and Control is a mathematical treatment of relevant problems in distributed control decision and multiagent systems The research reported was prompted by the recent rapid development in large scale networked and

embedded systems and communications One of the main reasons for the growing complexity in such systems is the dynamics introduced by computation and communication delays Reliability predictability and efficient utilization of processing power and network resources are central issues and the new theory and design methods presented here are needed to analyze and optimize the complex interactions that arise between controllers plants and networks The text also helps to meet requirements arising from industrial practice for a more systematic approach to the design of distributed control structures and corresponding information interfaces Theory for coordination of many different control units is closely related to economics and game theory network uses being dictated by congestion based pricing of a given pathway The text extends existing methods which represent pricing mechanisms as Lagrange multipliers to distributed optimization in a dynamic setting In *Distributed Decision Making and Control* the main theme is distributed decision making and control with contributions to a general theory and methodology for control of complex engineering systems in engineering economics and logistics This includes scalable methods and tools for modeling analysis and control synthesis as well as reliable implementations using networked embedded systems Academic researchers and graduate students in control science system theory and mathematical economics and logistics will find much to interest them in this collection first presented orally by the contributors during a sequence of workshops organized in Spring 2010 by the Lund Center for Control of Complex Engineering Systems a Linnaeus Center at Lund University Sweden

Researchers from across the world and in a variety of disciplines have become interested in describing and understanding the phenomenon of distributed projects and teams This study aims to measure the extent to which some dimensions of the decision making process are valued and used by distributed teams as well as the influence of certain contextual variables The proliferation of geographically dispersed teams is of course related to the explosive development of information and communication technologies ICT and particularly technologies related to the Internet Now that these technologies are performing better and becoming more accessible companies no longer seem to be challenged by the barrier of distance Working with dispersed teams remains a challenge for many organizations Many empirical studies reveal that some of the barriers are related to both the execution of tasks and the relationships among individuals There is therefore a need to better understand how **Distributed Decision Making.
