Distributed Sensor Networks A Multiagent Perspective:

Distributed Sensor Networks Victor Lesser, Charles L. Ortiz Jr., Milind Tambe, 2012-12-06 Distributed Sensor Networks is the first book of its kind to examine solutions to this problem using ideas taken from the field of multiagent systems The field of multiagent systems has itself seen an exponential growth in the past decade and has developed a variety of techniques for distributed resource allocation Distributed Sensor Networks contains contributions from leading international researchers describing a variety of approaches to this problem based on examples of implemented systems taken from a common distributed sensor network application each approach is motivated demonstrated and tested by way of a common challenge problem The book focuses on both practical systems and their theoretical analysis and is divided into three parts the first part describes the common sensor network challenge problem the second part explains the different technical approaches to the common challenge problem and the third part provides results on the formal analysis of a number of approaches taken to address the challenge problem

Massively Multi-Agent Systems I Toru Ishida, Les Gasser, Hideyuki Nakashima, 2005-08-25 In the era of ubiquitous computing and networking millions of electronic devices with computing facilities in the public space are connected with each other in ad hoc ways but are required to behave coherently Massively multi agent systems MMAS can be a major design paradigm or an implementation method for ubiquitous computing and ambient intelligence As the infrastructure of massively multi agent systems technologies such as grid computing together with semantic annotation can be combined with agent technology A new system design approach society centered design may be realized by embedding participatory technologies in human society This book originates from the First International Workshop on Massively Multi Agent Systems MMAS 2004 held in Kyoto Japan in December 2004 The 25 revised full selected and invited papers give an excellent introduction and overview on massively multi agent systems The papers are organized in parts on massively multi agent technology teams and organization ubiquitous computing and ambient intelligence and massively multi agent systems in the public space

Massively Multi-Agent Technology Nadeem Jamali, 2008-08-04 This book constitutes the thoroughly refereed post workshop proceedings of the joint AAMAS 2006 International Workshops on Massively Multi Agent Systems MMAS 2006 and on Large scale Multi Agent Systems LSMAS 2006 held in Hakodate Japan in May 2006 and of the International Workshop on Coordination and Control in Massively Multi Agent Systems CCMMS 2007 held in Honolulu HI USA in May 2007 as associated event of AAMAS 2007 The 13 revised full papers presented were carefully selected from the presentations made at the 3 workshops fall in 4 broad categories presenting a snapshot of current research Included are implementation strategies addressing coordination in the space of spatial and temporal distributed systems approaches to deal with complexity to make decisions such as task allocation and team formation efficiently by creating implicit or explicit encapsulations and finally a diverse range of applications to which these approaches may be applied from large scale agent based simulations to managing different types of networks to image segmentation

Innovations in Multi-Agent Systems and Application - 1 Dipti Srinivasan,2010-07-17 In today's world the increasing requirement for emulating the behavior of real world applications for achieving effective management and control has necessitated the usage of advanced computational techniques Computational intelligence based techniques that combine a variety of problem solvers are becoming increasingly pervasive The ability of these methods to adapt to the dynamically changing environment and learn in an online manner has increased their usefulness in simulating intelligent behaviors as observed in humans These intelligent systems are able to handle the stochastic and uncertain nature of the real world problems Application domains requiring interaction of people or organizations with different even possibly conflicting goals and proprietary information handling are growing exponentially To efficiently handle these types of complex interactions distributed problem solving systems like multiagent systems have become a necessity The rapid advancements in network communication technologies have provided the platform for successful implementation of such intelligent agent based problem solvers An agent can be viewed as a self contained concurrently executing thread of control that encapsulates some state and communicates with its environment and possibly other agents via message passing Agent based systems offer advantages when independently developed components must interoperate in a heterogeneous environment Such agent based systems are increasingly being applied in a wide range of areas including telecommunications Business process modeling computer games distributed system control and robot systems *Advances on Practical Applications of Agents and Multi-Agent Systems* Yves Demazeau,Toru Ishida,Juan Manuel Corchado Rodríguez,Javier Bajo Pérez,2013-04-17 This book constitutes the refereed proceedings of the 11th International Conference on Practical Applications of Agents and Multi Agent Systems PAAMS 2013 held in Salamanca Spain in May 2013 The 14 revised full papers and 9 short papers presented together with 16 demonstrations were carefully reviewed and selected from 70 submissions The papers report on the application and validation of agent based models methods and technologies in a number of key application areas including agents for real world problems crowd modeling and analysis decision making and discovery interaction with artificial agents mobility ubiquity and clouds multi agent design technology and simulation and organization *Advances in Artificial Intelligence* Canadian Society for Computational Studies of Intelligence.
