## **Calculated Risks How To Know When Numbers Deceive You:**

Calculated Risks Gerd Gigerenzer, 2015-11-10 At the beginning of the twentieth century H G Wells predicted that statistical thinking would be as necessary for citizenship in a technological world as the ability to read and write But in the twenty first century we are often overwhelmed by a baffling array of percentages and probabilities as we try to navigate in a world dominated by statistics Cognitive scientist Gerd Gigerenzer says that because we haven't learned statistical thinking we don't understand risk and uncertainty In order to assess risk everything from the risk of an automobile accident to the certainty or uncertainty of some common medical screening tests we need a basic understanding of statistics Astonishingly doctors and lawyers don't understand risk any better than anyone else Gigerenzer reports a study in which doctors were told the results of breast cancer screenings and then were asked to explain the risks of contracting breast cancer to a woman who received a positive result from a screening The actual risk was small because the test gives many false positives But nearly every physician in the study overstated the risk Yet many people will have to make important health decisions based on such information and the interpretation of that information by their doctors Gigerenzer explains that a major obstacle to our understanding of numbers is that we live with an illusion of certainty Many of us believe that HIV tests DNA fingerprinting and the growing number of genetic tests are absolutely certain But even DNA evidence can produce spurious matches We cling to our illusion of certainty because the medical industry insurance companies investment advisers and election campaigns have become purveyors of certainty marketing it like a commodity To avoid confusion says Gigerenzer we should rely on more understandable representations of risk such as absolute risks For example it is said that a mammography screening reduces the risk of breast cancer by 25 percent But in absolute risks that means that out of every 1 000 women who do not participate in screening 4 will die while out of 1 000 women who do 3 will die A 25 percent risk reduction sounds much more significant than a benefit that 1 out of 1 000 women will reap This eye opening book explains how we can overcome our ignorance of numbers and better understand the risks we may be taking with our money our health and our lives

**The Handbook of School Psychology** Cecil R. Reynolds,Terry B. Gutkin,2009 As the standard reference in the field this

Making and Rationality in the Modern World Keith E Stanovich demonstrates how work in the cognitive psychology of  
decision making has implications for the large and theoretically contentious debates about the nature of human rationality  
Written specifically for undergraduate psychology students the book presents a very practical approach to decision making  
which is too often perceived by students as an artificial set of skills used only in academia and not in the real world Instead  
Stanovich shows how good decision making procedures support rational behavior that enables people to act most efficiently  
to fulfill their goals He explains how the concept of rationality is understood in cognitive science in terms of good decision  
making and judgment Books in the Fundamentals of Cognition series serve as ideal instructional resources for advanced  
courses in cognitive psychology They provide an up to date well organized survey of our current understanding of the major  
theories of cognitive psychology The books are concise which allows instructors to incorporate the latest original research  
and readings into their courses without overburdening their students Focused without being too advanced and  
comprehensive without being too broad these books are the perfect resource for both students and instructors New
