The Calculus Collection Caren L. Diefenderfer, Roger B. Nelsen, 2010-12-31

The Calculus Collection is a useful resource for everyone who teaches calculus in high school or in a 2 or 4 year college or university It consists of 123 articles selected by a panel of six veteran high school teachers each of which was originally published in Math Horizons MAA Focus The American Mathematical Monthly The College Mathematics Journal or Mathematics Magazine The articles focus on engaging students who are meeting the core ideas of calculus for the first time The Calculus Collection is filled with insights alternate explanations of difficult ideas and suggestions for how to take a standard problem and open it up to the rich mathematical explorations available when you encourage students to dig a little deeper Some of the articles reflect an enthusiasm for bringing calculators and computers into the classroom while others consciously address themes from the calculus reform movement But most of the articles are simply interesting and timeless explorations of the mathematics encountered in a first course in calculus

Combinatorial and Algorithmic Mathematics Baha

Alzalg, 2024-07-31 Detailed review of optimization from first principles supported by rigorous math and computer science

explanations and various learning aids Supported by rigorous math and computer science foundations Combinatorial and

Algorithmic Mathematics From Foundation to Optimization provides a from scratch understanding to the field of optimization

discussing 70 algorithms with roughly 220 illustrative examples 160 nontrivial end of chapter exercises with complete

solutions to ensure readers can apply appropriate theories principles and concepts when required and Matlab codes that

solve some specific problems This book helps readers to develop mathematical maturity including skills such as handling

increasingly abstract ideas recognizing mathematical patterns and generalizing from specific examples to broad concepts

Starting from first principles of mathematical logic set theoretic structures and analytic and algebraic structures this book

covers both combinatorics and algorithms in separate sections then brings the material together in a final section on

optimization This book focuses on topics essential for anyone wanting to develop and apply their understanding of

optimization to areas such as data structures algorithms artificial intelligence machine learning data science computer

systems networks and computer security Combinatorial and Algorithmic Mathematics includes discussion on Propositional

logic and predicate logic set theoretic structures such as sets relations and functions and basic analytic and algebraic

structures such as sequences series subspaces convex structures and polyhedra Recurrence solving techniques counting

methods permutations combinations arrangements of objects and sets and graph basics and properties Asymptotic notations techniques for analyzing algorithms and computational complexity of various algorithms Linear optimization and its geometry and duality simplex and non simplex algorithms for linear optimization second order cone programming and semidefinite programming Combinatorial and Algorithmic Mathematics is an ideal textbook resource on the subject for students studying discrete structures combinatorics algorithms and optimization It also caters to scientists across diverse disciplines that incorporate algorithms and academics and researchers who wish to better understand some modern optimization methodologies
