C Programming Made Simple:

C Programming Made Simple Conor Sexton, 1997 C Programming Made Simple is a straight forward presentation of how to write computer programs in the Standard C Language It is deliberately light in tone avoids as far as possible the more complicated parts of the C Language and concentrates on getting aspiring C programmers up to speed in the shortest possible time This book is suitable as an introductory guide for beginning C programmers and for students taking a programming course Particularly with the later group in mind C Programming Made Simple presents in exercise form with answers more than 30 complete no trivial and useful programs The book covers all the essentials of C but does not deal with the dark corners of the language for example how the statement `x x` is evaluated It is not intended for experienced programmers other than as a general introductory reference or for compiler writers at all For such readers please refer to the Newnes C Pocket book by the same author The main objective of this book is to help you get the most results possible as quickly as possible and for the minimum effort expended The book is aimed more at the novice programmer rather than the expert The author has made the tone of the book correspondingly light and its prose correspondingly simple while hitting all the important points
