Cases Of The Reincarnation Type:

European Cases of the Reincarnation Type Ian Stevenson, M.D.,2008-11-13 Many cultures accept that a person may die and then come back to life in another form but Westerners have traditionally rejected the idea Recently however surveys conducted in Europe indicate a substantial increase in the number of Europeans who believe in reincarnation and numerous claims of reincarnation have been reported This book examines particular cases in Europe that are suggestive of reincarnation The first section provides a brief history of the belief in reincarnation among Europeans The second section considers eight cases from the first third of the twentieth century that were not independently investigated but were reported and sometimes published by the persons concerned The third section covers 32 cases from the second half of the twentieth century that were investigated by the author Many of these cases involved either children who exhibited unusual behavior attributed to a previous life or adults who experienced recurrent or vivid dreams attributed to a previous life In the fourth section the author compares European cases suggestive of reincarnation with those of other countries and cultures

Kelly,Emily Williams Kelly,2007 Practically every contemporary mainstream scientist presumes that all aspects of mind are generated by brain activity We demonstrate the inadequacy of this picture by assembling evidence for a variety of empirical phenomena which it cannot explain We further show that an alternative picture developed by F W H Myers and William James successfully accommodates these phenomena ratifies the common sense view of ourselves as causally effective conscious agents and is fully compatible with contemporary physics and neuroscience *Reincarnation Research* Source Wikipedia,2013-09 Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online Pages 19 Chapters Brian Weiss Carol Bowman Dolores Cannon *European Cases of the Reincarnation Type* Ian Lawton Ian Stevenson Jim B Tucker *Life Before Life Old Souls Reincarnation and Biology* Roger Woolger Satwant Pasricha *Twenty Cases Suggestive of Reincarnation Where Reincarnation and Biology Intersect* Xenoglossy Excerpt Reincarnation research is a branch of parapsychology concerning reincarnation specifically the study of cases of the reincarnation type that is cases in which a young child spontaneously makes remarks about a previous life he would have led before his birth about a person with whom the child identifies himself Psychiatrist Ian Stevenson from the University of Virginia School of Medicine investigated many reports of young children who claimed to remember a past life He conducted more than 2 500 case studies over a period of 40 years and published twelve books including *Twenty Cases Suggestive of Reincarnation* and *Where Reincarnation and Biology Intersect* Stevenson retired in 2002 and psychiatrist Jim B Tucker took over his work and wrote *Life Before Life* Other people who have undertaken research on reincarnation include Satwant Pasricha Godwin Samararatne Antonia Mills and Erlendur Haraldsson Research methods have involved analysis of childhood memories corresponding birthmarks and psychological cultural characteristics

No line of research has conclusively demonstrated the existence of reincarnation. Skeptics and the scientific community in general consider reincarnation research to be pseudoscientific. Some parapsychologists advocate developing protocols to guide, sort, compare, and evaluate cases. Reincarnation is the religious or philosophical concept that the soul or spirit after biological death begins a new life in a new body that may be human, animal, or plant.

Science, the Self, and Survival after Death Emily Williams Kelly, 2012-12-21. Ian Stevenson was a prominent and internationally known psychiatrist, researcher, and well-regarded figure in the field of psychical research. *Science, the Self, and Survival after Death* is the first book devoted to surveying the entirety of his work and the extraordinary scope and variety of his research. He studied universal questions that cut to the core of a person's identity: What is consciousness? How did we become the unique individuals that we are? Do we survive in some form after death? Stevenson's writings on the nature of science and the mind-body relationship, as well as his empirical research, demonstrate his strongly held belief that the methods of science can be applied successfully to such humanly vital questions. Featuring a selection of his papers and excerpts from his books, this collection presents the larger context of Stevenson's work and illustrates the issues and questions that guided him throughout his career.

Parapsychology Etzel Cardeña, John Palmer, David Marcusson-Clavertz, 2015-07-25. Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events, thinking of a long-lost friend just before he or she unexpectedly calls, or the ability to feel the presence of deceased loved ones. What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists, including Nobel laureates. Most of these researchers have concluded that some of these phenomena do occur, although we are far from explaining them to everyone's satisfaction. This book is the first in almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology, explaining what we know and don't know about so-called psi phenomena such as telepathy, precognition, or psychokinesis. Contributors evaluate the evidence for these phenomena, accounting for factors such as selective memory, wish fulfillment, and incorrect methods or analyses in some cases, offering psychological, physical, and biological theories. Instructors considering this book for use in a course may request an examination copy here.

[The Conscious Mind and the Material World](#) Douglas M. Stokes, 2015-01-24. What makes us who we are? From a scientific viewpoint, any individual's existence is improbable at best. Consciousness, as an actuality, is inarguable; its nature, however, remains elusive. This work argues the view of self as a field of pure consciousness, debating the existence of a continuing self and drawing conclusions about this entity and its relation to the physical body and the physical world. Beginning with an exploration of the relationship between mind and matter, it discusses ostensible psi phenomena such as extra-sensory perception and psychokinesis and their implications for our understanding of the mind and the cosmos. Additional topics include the perennial mind-body problem, the role of consciousness in quantum mechanics, and conversely, the role of quantum mechanics in the study of consciousness, the anthropic principle, and evidence for Intelligent Design.

Quasi religious questions such as the survival of consciousness after death are also addressed *Parapsychology, Philosophy, and Spirituality* David Ray Griffin, 1997-01-01 Examines why parapsychology has been held in disdain by scientists philosophers and theologians explores the evidence for ESP psychokinesis and life after death and suggests that these phenomena provide support for a meaningful postmodern spirituality Collected Writings: Rebirth as doctrine and experience : essays and case studies Francis Story, 1975 Cases of the Reincarnation Type: Twelve cases in Lebanon and Turkey Ian Stevenson, 1975 **Reincarnation** S.
