*Categorical Data Analysis with SAS and SPSS Applications* H. Bayo Lawal, 2003      **Categorical Data Analysis with Sas and Spss Applications** H. Bayo Lawal, 2003-05-01 This book covers the fundamental aspects of categorical data analysis with an emphasis on how to implement the models used in the book using SAS and SPSS This is accomplished through the frequent use of examples with relevant codes and instructions that are closely related to the problems in the text Concepts are explained in detail so that students can reproduce similar results on their own Beginning with chapter two exercises at the end of each chapter further strengthen students understanding of the concepts by requiring them to apply some of the ideas expressed in the text in a more advanced capacity Most of these exercises require intensive use of PC based statistical software Numerous tables with results of analyses including interpretations of the results further strengthen students understanding of the material Categorical Data Analysis With SAS R and SPSS Applications features detailed programs and outputs of all examples illustrated in the book using SAS R 8 02 and SPSS on the book s CD detailed coverage of topics often ignored in other books such as one way classification ch 3 the analysis of doubly classified data ch 11 and generalized estimating equations ch 12 and coverage of SAS R PROC FREQ GENMOD LOGISTIC PROBIT and CATMOD as well as SPSS PROC CROSSTABS GENLOG LOGLINEAR PROBIT LOGISTIC NUMREG and PLUM This book is ideal for upper level undergraduate or graduate level courses on categorical data analysis taught in departments of biostatistics statistics epidemiology psychology sociology political science and education A prerequisite of one year of calculus and statistics is recommended The book has been class tested by graduate students in the department of biometry and epidemiology at the Medical University of South Carolina      **Log-Linear Modeling** Alexander von Eye, Eun-Young Mun, 2014-08-21 An easily accessible introduction to log linear modeling for non statisticians Highlighting advances that have lent to the topic s distinct coherent methodology over the past decade Log Linear Modeling Concepts Interpretation and Application provides an essential introductory treatment of the subject featuring many new and advanced log linear methods models and applications The book begins with basic coverage of categorical data and goes on to describe the basics of hierarchical log linear models as well as decomposing effects in cross classifications and goodness of fit tests Additional topics include The generalized linear model GLM along with popular methods of coding such as effect coding and dummy coding Parameter interpretation and how to ensure that the parameters reflect the hypotheses being studied Symmetry rater agreement homogeneity of association logistic regression and reduced designs models Throughout the book real world data illustrate the application of models and understanding of the related results In addition each chapter utilizes R SYSTAT and EM software providing readers with an understanding of these programs in the context of hierarchical log linear modeling Log Linear Modeling is an excellent book for courses on categorical data analysis at the upper undergraduate and graduate levels It also serves as an excellent reference for applied researchers in virtually any area of study from medicine and statistics to the social sciences

**Analyzing Rater Agreement** Alexander von Eye, Eun Young Mun, 2014-04-04 Agreement among raters is of great importance in many domains For example in medicine diagnoses are often provided by more than one doctor to make sure the proposed treatment is optimal In criminal trials sentencing depends among other things on the complete agreement among the jurors In observational studies researchers increase reliability by examining discrepant ratings This book is intended to help researchers statistically examine rater agreement by reviewing four different approaches to the technique The first approach introduces readers to calculating coefficients that allow one to summarize agreements in a single score The second approach involves estimating log linear models that allow one to test specific hypotheses about the structure of a cross classification of two or more raters judgments The third approach explores cross classifications or raters agreement for indicators of agreement or disagreement and for indicators of such characteristics as trends The fourth approach compares the correlation or covariation structures of variables that raters use to describe objects behaviors or individuals These structures can be compared for two or more raters All of these methods operate at the level of observed variables This book

is intended as a reference for researchers and practitioners who describe and evaluate objects and behavior in a number of fields including the social and behavioral sciences statistics medicine business and education It also serves as a useful text for graduate level methods or assessment classes found in departments of psychology education epidemiology biostatistics public health communication advertising and marketing and sociology Exposure to regression analysis and log linear modeling is helpful

**Subject Guide to Books in Print**, 1991 *Statistical Challenges in Modern Astronomy II* G. Jogesh Babu, Eric D. Feigelson, 2012-12-06 Modern astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among astronomers The Statistical Challenges in Modern Astronomy II conference held in June 1996 at the Pennsylvania State University five years after the first conference brought astronomers and statisticians together to discuss methodological issues of common interest Time series analysis image analysis Bayesian methods Poisson processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses were important themes Astronomers frequently encounter troublesome situations such as heteroscedastic weighting of data unevenly spaced time series and selection effects leading to censoring and truncation Many problems were introduced at the conference in the context of large scale astronomical projects including LIGO AXAF XTE Hipparcos and digitized sky surveys This volume will be of interest to researchers and advanced students in both fields astronomers who seek exposure to recent developments in statistics and statisticians interested in confronting new problems It is edited by two faculty members of the Pennsylvania State University who have a long standing cross disciplinary collaboration and jointly authored the recent introductory monograph *Astrostatistics* G J Babu is Professor of Statistics Fellow of the Institute of Mathematical Statistics and Associate Editor of the Journal of Statistical Planning Inference and the Journal of Nonparametric Statistics Eric D Feigelson is Professor of Astronomy and Astrophysics

**Categorical Data Analysis** Alan Agresti, 1990-03-22 The past quarter

century has seen an explosion in the development of methods for analyzing categorical data. These methods have influenced and been influenced by the increasing availability of multivariate data sets with categorical responses in the social, behavioral, and biomedical sciences, as well as in public health, ecology, education, marketing, food science, and industrial quality control. *Categorical Data Analysis* describes the most important new methods, offering a unified presentation of modeling using generalized linear models and emphasizing loglinear and logit modeling techniques. Contributions of noted statisticians—Pearson, Yule, Fisher, Neyman, Cochran—whose pioneering efforts set the pace for the evolution of modern methods are examined, as well. Special features of the book include coverage of methods for repeated measurement data, which have become increasingly important in biomedical applications; prescriptions for how ordinal variables should be treated differently than nominal variables; derivations of basic asymptotic and fixed sample size inferential methods; discussion of exact small sample procedures; more than 40 examples of analyses of real data sets, including aspirin use and heart disease, job satisfaction and income, seat belt use and injuries in auto accidents, and predicting outcomes of baseball games; more than 400 exercises to facilitate interpretation and application of methods; *Categorical Data Analysis* also contains an appendix that describes the use of computer software currently available for performing the analyses presented in the book. A

comprehensive bibliography and notes at the end of each chapter round out the work, making it a complete, invaluable reference for statisticians, biostatisticians, and professional researchers. *Psychology Science*, 2004

**Data Analytic Literacy** Andrew Banasiewicz, 2023-07-24 The explosive growth in volume and varieties of data generated by the seemingly endless arrays of digital systems and applications is rapidly elevating the importance of being able to utilize data. In fact, data analytic literacy is becoming as important now at the onset of the Digital Era as rudimentary literacy and numeracy were throughout the Industrial Era. And yet, what constitutes data analytic literacy is poorly understood. To some, data analytic literacy is the ability to use basic statistics; to others, it is data science; light and to still others, it is just general familiarity with common data analytic outcomes. Exploring the scope and the structure of rudimentary data analytic competencies is at the core of this book, which takes the perspective that data analytics is a new and distinct domain of knowledge and practice. It offers application-minded framing of rudimentary data analytic competencies built around conceptually sound and practically meaningful processes and mechanics of systematically transforming messy and heterogeneous data into informative insights. *Data Analytic Literacy* is meant to offer an easy-to-follow overview of the critical elements of the reasoning behind basic data manipulation and analysis approaches and steps, coupled with the commonly used data analytic and data communication techniques and tools. It offers an all-inclusive guide to developing basic data analytic competencies. *Sci-tech News*, 2003

*Current Index to Statistics, Applications, Methods and Theory*, 1992 The *Current Index to Statistics* (CIS) is a bibliographic index of publications in statistics, probability, and related fields. *Review of Economic Dynamics* Society for Economic Dynamics, 2001
