

Parse the config first to understand what to do.

Find all token files based on the paths defined in the 'source' key of the config.

Perform a deep merge on all token files to create a single object.

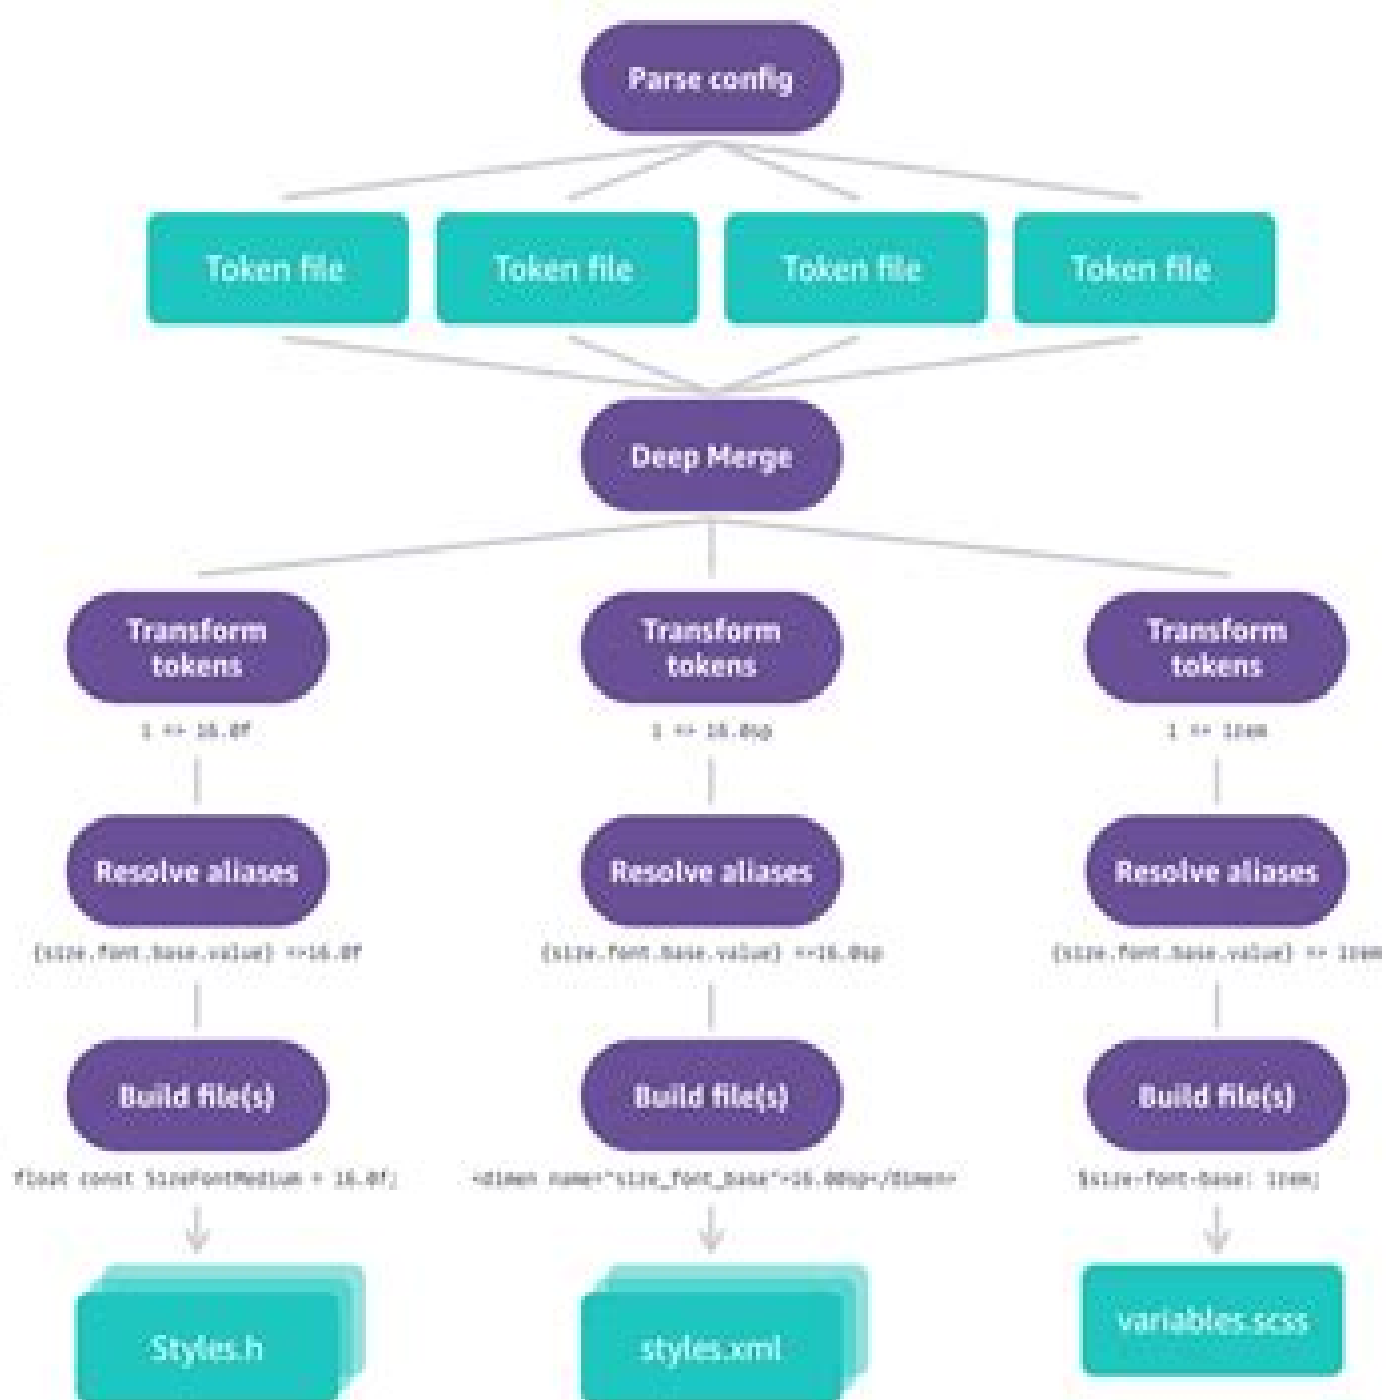

For each platform defined in the config:

Modify each token so it can be consumed on a given platform. Transforms are applied in order defined in the config.

Replace any references or aliases with the final value.

Prepare the tokens according to the file formats defined in the config and save them into file(s).

Built files can then be consumed in each platform.
