Categories of Highest Weight Modules: Applications to Classical Hermitian Symmetric Pairs Thomas J. Enright, Brad Shelton, 1987 The category of highest weight representations is of special interest withing the full set of representations of a real semisimple Lie group This memoir describes the structure of the generalized Verma modules as well as the Kazhdan Lusztig data for the simple modules in this category for the classical groups In particular explicit formulas for composition factors of generalized Verma modules and Kazhdan Lusztig polynomials are given **Symmetry: Representation Theory and Its Applications** Roger Howe, Markus Hunziker, Jeb F. Willenbring, 2015-01-04 Nolan Wallach s mathematical research is remarkable in both its breadth and depth His contributions to many fields include representation theory harmonic analysis algebraic geometry combinatorics number theory differential equations Riemannian geometry ring theory and quantum information theory The touchstone and unifying thread running through all his work is the idea of symmetry This volume is a collection of invited articles that pay tribute to Wallach s ideas and show symmetry at work in a large variety of areas The articles predominantly expository are written by distinguished mathematicians and contain sufficient preliminary material to reach the widest possible audiences Graduate students mathematicians and physicists interested in representation theory and its applications will find many gems in this volume that have not appeared in print elsewhere Contributors D Barbasch K Baur O Bucicovschi B Casselman D Ciubotaru M Colarusso P Delorme T Enright W T Gan A Garsia G Gour B Gross J Haglund G Han P Harris J Hong R Howe M Hunziker B Kostant H Kraft D Meyer R Miatello L Ni G Schwarz L Small D Vogan N Wallach J Wolf G Xin O Yacobi A Filtered Category \mathcal{O} and Applications Ronald S. Irving, 1990 In this paper the structure of generalized Verma modules is studied as well as the structure of their projective covers in a suitable version of the Bernstein Gelfand Gelfand category script capital O **Representations of Semisimple Lie Algebras in the BGG Category O** James E. Humphreys, 2021-07-14 This is the first textbook treatment of work leading to the landmark 1979 Kazhdan Lusztig Conjecture on characters of simple highest weight modules for a semisimple Lie algebra \mathfrak{g} over \mathbb{C} The setting is the module category \mathcal{O} introduced by Bernstein Gelfand Gelfand which includes all highest weight modules for \mathfrak{g} such as Verma modules and finite dimensional simple modules Analogues of this category have become influential in many areas of representation theory Part I can be used as a text for independent study or for a mid level one semester graduate course it includes exercises and examples The main prerequisite is familiarity with the structure theory of \mathfrak{g} Basic techniques in category \mathcal{O} such as BGG Reciprocity and Jantzen s translation functors are developed culminating in an overview of the proof of the Kazhdan Lusztig Conjecture due to Beilinson Bernstein and Brylinski Kashiwara The full proof however is beyond the scope of this book requiring deep geometric methods D D modules and perverse sheaves on the flag variety Part II introduces closely related topics important in current research parabolic category \mathcal{O} projective functors tilting modules twisting and completion functors and Koszul duality theorem of Beilinson
