Modern Phylogenetic Comparative Methods and Their Application in Evolutionary Biology László Zsolt Garamszegi, 2014-07-29 Phylogenetic comparative approaches are powerful analytical tools for making evolutionary inferences from interspecific data and phylogenies The phylogenetic toolkit available to evolutionary biologists is currently growing at an incredible speed but most methodological papers are published in the specialized statistical literature and many are incomprehensible for the user community This textbook provides an overview of several newly developed phylogenetic comparative methods that allow to investigate a broad array of questions on how phenotypic characters evolve along the branches of phylogeny and how such mechanisms shape complex animal communities and interspecific interactions The individual chapters were written by the leading experts in the field and using a language that is accessible for practicing evolutionary biologists The authors carefully explain the philosophy behind different methodologies and provide pointers mostly using a dynamically developing online interface on how these methods can be implemented in practice These conceptual and practical materials are essential for expanding the qualification of both students and scientists but also offer a valuable resource for educators Another value of the book are the accompanying online resources available at <http://www.mpcm-evolution.com> where the authors post and permanently update practical materials to help embed methods into practice

Anthropological Research John J. Poggie, Billie R. DeWalt, William W.

Dressler,1992-01-01 The authors of this book share a common assumption about anthropology that replicable and systematic procedures of data collection and analysis are essential requirements for building useful cultural theory They view cultural theory as both an aid to understanding sociocultural phenomena and as an aid in changing existing social conditions This book focuses on five specific themes representing a set of principles for conducting research the importance of intra cultural variation the blending of qualitative and quantitative approaches the search for micro macro levels of generalization the innovative matching of methodology to research problems and the practical or applied merit of systematically generated and evaluated theory It contributes to scientific anthropology and shows that the credibility and utility of anthropological research in policy matters is enhanced by scientific research methodology
